STANDARDS OF THE American Institute of Electrical Engineers

No. 34

TELEPHONY AND TELEGRAPHY

(Reprinted from 1922 Edition A. I. E. E. Standards)

The Standards of the A. I. E. E. are the result of over twenty-five years of work on standardization by the Institute, conducted by members actively engaged in the design, manufacture, operation and specifying of electrical apparatus. These men have freely contributed their time and knowledge, and have conducted much experimental work for the purpose. The Standards record the best American practise and experience.

In framing these Standards, the chief purpose has been to define terms and conditions which characterize the rating and behavior of electrical apparatus, with special reference to the conditions of acceptance tests.

The Committee takes this occasion to draw attention to the value of suggestions based upon experience gained in the application of the Standards to general practise. Any suggestions looking toward improvement in the Standards will be welcomed for the guidance of the Committee in preparation of future editions, and should be communicated to the Secretary of the A. I. E. E. Standards Committee, 33 West 39th St., New York.

The Standards of the Institute are issued in pamphlet form, each pamphlet dealing with a specific subject. This subdivision of the Rules simplifies the process of keeping the Standards revised to conform with the latest developments and enables those interested in a particular field to obtain by itself the material covering that field.

This section of the A. I. E. E. Standards is a reprint of the material published in the 1922 edition. A committee is now working on a complete revision of this section and the 1922 Standards on Telephony and Telegraphy are reprinted in this form so that they may be available pending the completion of the work of revision.
