Foreword

(This foreword is not part of IEEE Std 522-1977, Guide for Testing Turn-to-Turn Insulation on Form-Wound Stator Coils for Alternating-Current Rotating Electric Machines — For Trial Use.)

This test procedure was initiated by the Insulation Subcommittee of the Rotating Machinery Committee of the IEEE Power Engineering Society. There are no prior guides dealing with the testing of turn-to-turn insulation. The members of the Working Group were:

R. M. Sexton, *Chairman*

C. N. Brown	L. M. Johnson
A. W. W. Cameron	W. W. Pendleton
W. G. Graig	E. H. Povey
M. G. Cramp	R. G. Rhundy
E. B. Curdts	V. R. Scardina
M. M. Fromm	W. J. Sheets
E. Hattan	M. E. Willis
E. S. Yates	

Notice of Trial Use

Comments on this Trial-Use Guide are welcomed and should be addressed to the Secretary,

IEEE Standards Committee
345 East 47th Street
New York, N.Y. 10017

After a trial-use period of approximately one year, the Group responsible for this document will prepare a revision and submit it to the Standards Committee for approval.

Contents

SECTION	PAGE
1. Introduction	5
2. Scope	5
3. Service Conditions.	5
4. Suggested Test Devices	6
5. Test Sequence	6
6. High-Frequency Test Levels for New Coils	6
7. Maintenance Tests or Tests After Installation of Machines	7
Bibliography	7
APPENDIX	
A1 A Method for Applying Surge Tests to Complete Windings	9
A2 Test Procedure for Wound Machines.	10
A3 Test Procedure for Coils During Winding	12
A4 Further Details	12
