Full document details: IEEE 802.3-2015

Abstract: Ethernet local area network operation is specified for selected speeds of operation from 1 Mb/s to 100 Gb/s using a common media access control (MAC) specification and management information base (MIB). The Carrier Sense Multiple Access with Collision Detection (CSMA/CD) MAC protocol specifies shared medium (half duplex) operation, as well as full duplex operation. Speed specific Media Independent Interfaces (MIIs) allow use of selected Physical Layer devices (PHY) for operation over coaxial, twisted pair or fiber optic cables, or electrical backplanes. System considerations for multisegment shared access networks describe the use of Repeaters which are defined for operational speeds up to 1000 Mb/s. Local Area Network (LAN) operation is supported at all speeds. Other specified capabilities include: various PHY types for access networks, PHYs suitable for metropolitan area network applications, and the provision of power over selected twisted pair PHY types.

Keywords: 10BASE; 100BASE; 1000BASE; 10GBASE; 40GBASE; 100GBASE; Fast Ethernet; 10 Gigabit Ethernet; 40 Gigabit Ethernet; 100 Gigabit Ethernet; attachment unit interface; AUI; Auto Negotiation; Backplane Ethernet; data processing; DTE Power via the MDI; EPON; Ethernet; Ethernet in the First Mile; Ethernet passive optical network; Fast Ethernet; Gigabit Ethernet; GMII; IEEE 802.3™; information exchange; local area network; management; medium dependent interface; media independent interface; MDI; MIB; MII; XGMII; PHY; physical coding sublayer; Physical Layer; physical medium attachment; PMA; Power over Ethernet; repeater; type field; VLAN TAG

Important Notices and Disclaimers Concerning IEEE Standards Documents

IEEE documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page, appear in all standards and may be found under the heading "Important Notice" or "Important Notices and Disclaimers Concerning IEEE Standards Documents."

Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents

IEEE Standards documents (standards, recommended practices, and guides), both full-use and trial-use, are developed within IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association ("IEEE-SA") Standards Board. IEEE ("the Institute") develops its standards through a consensus development process, approved by the American National Standards Institute ("ANSI"), which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE does not warrant or represent the accuracy or content of the material contained in its standards, and expressly disclaims all warranties (express, implied and statutory) not included in this or any other document relating to the standard, including, but not limited to, the warranties of: merchantability; fitness for a particular purpose; non-infringement; and quality, accuracy, effectiveness, currency, or completeness of material. In addition, IEEE disclaims any and all conditions relating to: results; and workmanlike effort. IEEE standards documents are supplied "AS IS" and "WITH ALL FAULTS."

Use of an IEEE standard is wholly voluntary. The existence of an IEEE standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

Translations

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE should be considered the approved IEEE standard.

Official statements

A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, or be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position of IEEE.

Comments on standards

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE. However, IEEE does not provide consulting information or advice pertaining to IEEE Standards documents. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to comments or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in revisions to an IEEE standard is welcome to join the relevant IEEE working group.

Comments on standards should be submitted to the following address:

Secretary, IEEE-SA Standards Board
445 Hoes Lane
Piscataway, NJ 08854 USA

Laws and regulations

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

Copyrights

IEEE draft and approved standards are copyrighted by IEEE under U.S. and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, IEEE does not waive any rights in copyright to the documents.

Photocopies

Subject to payment of the appropriate fee, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every ten years. When a document is more than ten years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE-SA Website at http://ieeexplore.ieee.org/xpl/standards.jsp or contact IEEE at the address listed previously. For more information about the IEEE-SA or IEEE's standards development process, visit the IEEE-SA Website at http://standards.ieee.org.

Errata

Errata, if any, for all IEEE standards can be accessed on the IEEE-SA Website at the following URL: http://standards.ieee.org/findstds/errata/index.html. Users are encouraged to check this URL for errata periodically.

Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE-SA Website at http://standards.ieee.org/about/sasb/patcom/patents.html. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

Participants

The following individuals were officers and members of the IEEE 802.3 working group at the beginning of the IEEE 802.3bx working group ballot.

David J. Law, *IEEE 802.3 Working Group Chair*
Adam Healey, *IEEE 802.3 Working Group Vice-Chair*
Pete Anslow, *IEEE 802.3 Working Group Secretary*
Steven B. Carlson, *IEEE 802.3 Working Group Executive Secretary*
Valerie Maguire, *IEEE 802.3 Working Group Treasurer*

Adam Healey, *IEEE P802.3 (IEEE 802.3bx) Task Force Chair and Editor-in-Chief*
Valerie Maguire, *IEEE P802.3 (IEEE 802.3bx) Task Force Recording Secretary and Section Editor*
Pete Anslow, *IEEE P802.3 (IEEE 802.3bx) Task Force Section Editor*
Marek Hajduczenia, *IEEE P802.3 (IEEE 802.3bx) Task Force Section Editor*

Historical participants

The following individuals participated in the IEEE 802.3 working group during various stages of the standard's development. Since the initial publication, many IEEE standards have added functionality or provided updates to material included in this standard. Included is a historical list of participants who have dedicated their valuable time, energy, and knowledge to the creation of this material:

IEEE Std 802.3 document	Date approved by IEEE and ANSI	Officers at the time of working group ballot
IEEE Std 802.3-1985, Original 10 Mb/s standard, MAC, PLS, AUI, 10BASE5	23 June 1983 (IEEE) 31 December 1984 (ANSI)	**Donald C. Loughry,** *Working Group Chair*
IEEE Std 802.3a-1988 (Clause 10), 10 Mb/s MAU 10BASE2	15 November 1985 (IEEE) 28 December 1987 (ANSI)	**Donald C. Loughry,** *Working Group Chair* **Alan Flatman,** *Task Force Chair*
IEEE Std 802.3b-1985 (Clause 11), 10 Mb/s Broadband MAU, 10BROAD36	19 September 1985 (IEEE) 28 February 1986 (ANSI)	**Donald C. Loughry,** *Working Group Chair* **Menachem Abraham,** *Task Force Chair*
IEEE Std 802.3c-1985 (9.1–9.8), 10 Mb/s Baseband Repeater	12 December 1985 (IEEE) 4 June 1986 (ANSI)	**Donald C. Loughry,** *Working Group Chair* **Geoffrey O. Thompson,** *Task Force Chair*
IEEE Std 802.3d-1987 (9.9), 10 Mb/s Fiber MAU, FOIRL	10 December 1987 (IEEE) 9 February 1989 (ANSI)	**Donald C. Loughry,** *Working Group Chair* **Steven Moustakas,** *Task Force Chair*
IEEE Std 802.3e-1987 (Clause 12), 1 Mb/s MAU and Hub 1BASE5	11 June 1987 (IEEE) 15 December 1987 (ANSI)	**Donald C. Loughry,** *Working Group Chair* **Robert Galin,** *Task Force Chair*
IEEE Std 802.3h-1990 (Clause 5), 10 Mb/s Layer Management, DTEs	28 September 1990 (IEEE) 11 March 1991 (ANSI)	**Donald C. Loughry,** *Working Group Chair* **Andy J. Luque,** *Task Force Chair*
IEEE Std 802.3i-1990 (Clauses 13 and 14), 10 Mb/s UTP MAU, 10 BASE-T	28 September 1990 (IEEE) 11 March 1991 (ANSI)	**Donald C. Loughry**, *Working Group Chair* **Patricia Thaler,** *Task Force Chair (initial)* **Richard Anderson,** *Task Force Chair (final)*
IEEE Std 802.3j-1993 (Clauses 15–18), 10 Mb/s Fiber MAUs 10BASE-FP, 10BASE-FB, and 10BASE-FL	15 September 1993 (IEEE) 15 March 1994 (ANSI)	**Patricia Thaler,** *Working Group Chair* **Keith Amundsen,** *Task Force Chair (initial)* **Frederick Scholl,** *Task Force Chair (final)* **Michael E. Lee,** *Technical Editor*

When the IEEE-SA Standards Board approved this standard on 3 September 2015, it had the following membership:

John Kulick, *Chair*
Jon Walter Rosdahl, *Vice Chair*
Richard H. Hulett, *Past Chair*
Konstantinos Karachalios, *Secretary*

Masayuki Ariyoshi
Ted Burse
Stephen Dukes
Jean-Philippe Faure
J. Travis Griffith

Full document details: IEEE 802.3-2015

Introduction

This introduction is not part of IEEE Std 802.3™-2015, IEEE Standard for Ethernet.

IEEE Std 802.3™ was first published in 1985. Since the initial publication, many projects have added functionality or provided maintenance updates to the specifications and text included in the standard. Each IEEE 802.3 project/amendment is identified with a suffix (e.g., IEEE Std 802.3ba™-2010).

The half duplex Media Access Control (MAC) protocol specified in IEEE Std 802.3-1985 is Carrier Sense Multiple Access with Collision Detection (CSMA/CD). This MAC protocol was key to the experimental Ethernet developed at Xerox Palo Alto Research Center, which had a 2.94 Mb/s data rate. Ethernet at 10 Mb/s was jointly released as a public specification by Digital Equipment Corporation (DEC), Intel and Xerox in 1980. Ethernet at 10 Mb/s was approved as an IEEE standard by the IEEE Standards Board in 1983 and subsequently published in 1985 as IEEE Std 802.3-1985. Since 1985, new media options, new speeds of operation, and new capabilities have been added to IEEE Std 802.3. A full duplex MAC protocol was added in 1997.

Some of the major additions to IEEE Std 802.3 are identified in the marketplace with their project number. This is most common for projects adding higher speeds of operation or new protocols. For example, IEEE Std 802.3u™ added 100 Mb/s operation (also called Fast Ethernet), IEEE Std 802.3z added 1000 Mb/s operation (also called Gigabit Ethernet), IEEE Std 802.3ae added 10 Gb/s operation (also called 10 Gigabit Ethernet), IEEE Std 802.3ah™ specified access network Ethernet (also called Ethernet in the First Mile) and IEEE Std 802.3ba added 40 Gb/s operation (also called 40 Gigabit Ethernet) and 100 Gb/s operation (also called 100 Gigabit Ethernet). These major additions are all now included in and are superseded by IEEE Std 802.3-2015 and are not maintained as separate documents.

At the date of IEEE Std 802.3-2015 publication, IEEE Std 802.3 is composed of the following documents:

IEEE Std 802.3-2015

Section One—Includes Clause 1 through Clause 20 and Annex A through Annex H and Annex 4A. Section One includes the specifications for 10 Mb/s operation and the MAC, frame formats and service interfaces used for all speeds of operation.

Section Two—Includes Clause 21 through Clause 33 and Annex 22A through Annex 33E. Section Two includes management attributes for multiple protocols and speed of operation as well as specifications for providing power over twisted pair cabling for multiple operational speeds. It also includes general information on 100 Mb/s operation as well as most of the 100 Mb/s Physical Layer specifications.

Section Three—Includes Clause 34 through Clause 43 and Annex 36A through Annex 43C. Section Three includes general information on 1000 Mb/s operation as well as most of the 1000 Mb/s Physical Layer specifications.

Section Four—Includes Clause 44 through Clause 55 and Annex 44A through Annex 55B. Section Four includes general information on 10 Gb/s operation as well as most of the 10 Gb/s Physical Layer specifications.

Section Five—Includes Clause 56 through Clause 77 and Annex 57A through Annex 76A. Clause 56 through Clause 67 and Clause 75 through Clause 77, as well as associated annexes, specify subscriber access and other Physical Layers and sublayers for operation from 512 kb/s to 10 Gb/s, and defines services and protocol elements that enable the exchange of IEEE Std 802.3 format frames between stations in a subscriber access network. Clause 68 specifies a 10 Gb/s Physical Layer specification.

Documents
Document Sharing Hub
Full document details: IEEE 802.3-2015

Clause 69 through Clause 74 and associated annexes specify Ethernet operation over electrical backplanes at speeds of 1000 Mb/s and 10 Gb/s.

Section Six—Includes Clause 78 through Clause 95 and Annex 83A through Annex 93C. Clause 78 specifies Energy-Efficient Ethernet. Clause 79 specifies IEEE 802.3 Organizationally Specific Link Layer Discovery Protocol (LLDP) type, length, and value (TLV) information elements. Clause 80 through Clause 95 and associated annexes includes general information on 40 Gb/s and 100 Gb/s operation as well the 40 Gb/s and 100 Gb/s Physical Layer specifications. Clause 90 specifies Ethernet support for time synchronization protocols.

A companion document IEEE Std 802.3.1 describes Ethernet management information base (MIB) modules for use with the Simple Network Management Protocol (SNMP). IEEE Std 802.3.1 is updated to add management capability for enhancements to IEEE Std 802.3 after approval of the enhancements.

IEEE Std 802.3 will continue to evolve. New Ethernet capabilities are anticipated to be added within the next few years as amendments to this standard.

List of special symbols

For the benefit of users who have received this document by electronic means, what follows is a list of special symbols and operators. If any of these symbols or operators fail to print out correctly, the editors apologize and hope that this table will at least help to sort out the meaning of the resulting funny-shaped blobs and strokes.

Special symbols and operators

Printed character	Meaning	Font
*	Boolean AND	Symbol
+	Boolean OR, arithmetic addition	Symbol
^	Boolean XOR	Times New Roman
!	Boolean NOT	Symbol
x	Multiplication	Symbol
<	Less than	Symbol
≤	Less than or equal to	Symbol
>	Greater than	Symbol
≥	Greater than or equal to	Symbol
=	Equal to	Symbol
≈	Approximately equal to	Symbol
≠	Not equal to	Symbol
⇐	Assignment operator	Symbol
∈	Indicates membership	Symbol
∉	Indicates nonmembership	Symbol
±	Plus or minus (a tolerance)	Symbol
°	Degrees	Symbol
∑	Summation	Symbol
√	Square root	Symbol
—	Big dash (em dash)	Times New Roman
–	Little dash (en dash), subtraction	Times New Roman
|	Vertical bar	Times New Roman
†	Dagger	Times New Roman
‡	Double dagger	Times New Roman
α	Lower case alpha	Symbol
β	Lower case beta	Symbol
γ	Lower case gamma	Symbol
δ	Lower case delta	Symbol
ε	Lower case epsilon	Symbol
λ	Lower case lambda	Symbol
μ	Lower case mu	Times New Roman
Π	Upper case pi	Symbol
Ω	Upper case omega	Symbol

IEEE Standard for Ethernet

SECTION ONE

This section includes Clause 1 through Clause 20, Annex A through Annex H, and Annex 4A.

Contents

1. Introduction 54

1.1 Overview 54
1.1.1 Scope 54
1.1.2 Basic concepts 55
1.1.2.1 Half duplex operation 55
1.1.2.2 Full duplex operation 55
1.1.3 Architectural perspectives 55
1.1.3.1 Architectural rationale 56
1.1.3.2 Compatibility interfaces 56
1.1.4 Layer interfaces 59
1.1.5 Application areas 59
1.2 Notation 59
1.2.1 State diagram conventions 59
1.2.2 Service specification method and notation 60
1.2.2.1 Classification of service primitives 61
1.2.3 Physical Layer and media notation 61

Copyright © 2016 IEEE. All rights reserved.

Full document details: IEEE 802.3-2015
Documents
Document Sharing Hub

1.2.4 Physical Layer message notation 62
1.2.5 Hexadecimal notation 62
1.2.6 Accuracy and resolution of numerical quantities 62
1.3 Normative references 62
1.4 Definitions 69
1.5 Abbreviations 98

2. Media Access Control (MAC) service specification 104

2.1 Scope and field of application 104
2.2 Overview of the service 104
2.2.1 General description of services provided by the layer 104
2.2.2 Model used for the service specification 104
2.2.3 Overview of interactions 104
2.2.4 Basic services 105
2.3 Detailed service specification 105
2.3.1 MA_DATA.request 105
2.3.1.1 Function 105
2.3.1.2 Semantics of the service primitive 105
2.3.1.3 When generated 105
2.3.1.4 Effect of receipt 105
2.3.1.5 Additional comments 105
2.3.2 MA_DATA.indication 106
2.3.2.1 Function 106
2.3.2.2 Semantics of the service primitive 106
2.3.2.3 When generated 106
2.3.2.4 Effect of receipt 107
2.3.2.5 Additional comments 107

3. Media Access Control (MAC) frame and packet specifications 108

3.1 Overview 108
3.1.1 Packet format 108
3.1.2 Service interface mappings 109
3.2 Elements of the MAC frame and packet 109
3.2.1 Preamble field 109
3.2.2 Start Frame Delimiter (SFD) field 109
3.2.3 Address fields 109
3.2.3.1 Address designation 110
3.2.4 Destination Address field 110
3.2.5 Source Address field 111
3.2.6 Length/Type field 111
3.2.7 MAC Client Data field 111
3.2.8 Pad field 112
3.2.9 Frame Check Sequence (FCS) field 112
3.2.10 Extension field 112
3.3 Order of bit transmission 113
3.4 Invalid MAC frame 113

4. Media Access Control 114

4.1 Functional model of the MAC method 114
4.1.1 Overview 114
4.1.2 CSMA/CD operation 115

6. Physical Signaling (PLS) service specifications 170

6.1 Scope and field of application 170
6.2 Overview of the service 170
6.2.1 General description of services provided by the layer 170
6.2.2 Model used for the service specification 170
6.2.3 Overview of interactions 170
6.2.4 Basic services and options 171
6.3 Detailed service specification 171
6.3.1 Peer-to-peer service primitives 171
6.3.1.1 PLS_DATA.request 171
6.3.1.1.1 Function 171
6.3.1.1.2 Semantics of the service primitive 171
6.3.1.1.3 When generated 171
6.3.1.1.4 Effect of receipt 171
6.3.1.2 PLS_DATA.indication 172
6.3.1.2.1 Function 172
6.3.1.2.2 Semantics of the service primitive 172
6.3.1.2.3 When generated 172
6.3.1.2.4 Effect of receipt 172
6.3.2 Sublayer-to-sublayer service primitives 172
6.3.2.1 PLS_CARRIER.indication 172
6.3.2.1.1 Function 172
6.3.2.1.2 Semantics of the service primitive 172
6.3.2.1.3 When generated 172
6.3.2.1.4 Effect of receipt 172
6.3.2.2 PLS_SIGNAL.indication 173
6.3.2.2.1 Function 173
6.3.2.2.2 Semantics of the service primitive 173
6.3.2.2.3 When generated 173
6.3.2.2.4 Effect of receipt 173
6.3.2.3 PLS_DATA_VALID.indication 173
6.3.2.3.1 Function 173
6.3.2.3.2 Semantics of the service primitive 173
6.3.2.3.3 When generated 173
6.3.2.3.4 Effect of receipt 173

7. Physical Signaling (PLS) and Attachment Unit Interface (AUI) specifications 174

7.1 Scope 174
7.1.1 Definitions 174
7.1.2 Summary of major concepts 174
7.1.3 Application 175

7.1.4 Modes of operation 175
7.1.5 Allocation of function 175
7.2 Functional specification 175
7.2.1 PLS–PMA (DTE–MAU) Interface protocol 175
7.2.1.1 PLS to PMA messages 176
7.2.1.1.1 output message 176
7.2.1.1.2 output_idle message 177
7.2.1.1.3 normal message 177
7.2.1.1.4 isolate message (optional) 177
7.2.1.1.5 mau_request message (optional) 177
7.2.1.2 PMA to PLS interface 179
7.2.1.2.1 input message 179
7.2.1.2.2 input_idle message 181
7.2.1.2.3 signal_quality_error message 181
7.2.1.2.4 mau_available message 181
7.2.1.2.5 mau_not_available message (optional) 181
7.2.2 PLS interface to MAC and management entities 182
7.2.2.1 PLS–MAC interface 182
7.2.2.1.1 OUTPUT_UNIT 182
7.2.2.1.2 OUTPUT_STATUS 182
7.2.2.1.3 INPUT_UNIT 182
7.2.2.1.4 CARRIER_STATUS 182
7.2.2.1.5 SIGNAL_STATUS 183
7.2.2.1.6 DATA_VALID_STATUS 183
7.2.2.2 PLS–management entity interface 183
7.2.2.2.1 RESET_REQUEST 183
7.2.2.2.2 RESET_RESPONSE 184
7.2.2.2.3 MODE_CONTROL 184
7.2.2.2.4 SQE_TEST 184
7.2.3 Frame structure 184
7.2.3.1 Silence 185
7.2.3.2 Preamble 185
7.2.3.3 Start of Frame Delimiter (SFD) 185
7.2.3.4 Data 185
7.2.3.5 End of transmission delimiter 185
7.2.4 PLS functions 185
7.2.4.1 Reset and Identify function 186
7.2.4.2 Mode function 186
7.2.4.3 Output function 187
7.2.4.4 Input function 187
7.2.4.5 Error Sense function 187
7.2.4.6 Carrier Sense function 188
7.3 Signal characteristics 188
7.3.1 Signal encoding 188
7.3.1.1 Data encoding 188
7.3.1.2 Control encoding 192
7.3.2 Signaling rate 193
7.3.3 Signaling levels 193
7.4 Electrical characteristics 193
7.4.1 Driver characteristics 193
7.4.1.1 Differential output voltage, loaded 193
7.4.1.2 Requirements after idle 195
7.4.1.3 AC common-mode output voltage 195
7.4.1.4 Differential output voltage, open circuit 195

18.5.4.1 Implementation identification ... 525
18.5.4.2 Protocol summary ... 525
18.5.5 Major capabilities/options ... 526
18.5.6 PICS proforma tables for the type 10BASE-FL MAU ... 526
18.5.6.1 Compatibility considerations ... 526
18.5.6.2 Optical transmit parameter ... 527
18.5.6.3 Optical receive parameters ... 528
18.5.6.4 Optical medium connector plug and socket ... 528
18.5.6.5 MAU functions ... 529
18.5.6.6 PMA interface messages ... 529
18.5.6.7 PMA-to-MDI OTD messages ... 529
18.5.6.8 MDI ORD-to-PMA messages ... 529
18.5.6.9 Transmit function ... 530
18.5.6.10 Receive function ... 530
18.5.6.11 Loopback function ... 531
18.5.6.12 Collision Presence function ... 531
18.5.6.13 signal_quality_error Message (SQE) Test function ... 531
18.5.6.14 Jabber function ... 532
18.5.6.15 Link Integrity Test function ... 532
18.5.6.16 MAU state diagram requirements ... 534
18.5.6.17 MAU-to-AUI signal characteristics ... 534

18.5.6.18 MAU-to-AUI DI and CI driver characteristics ... 535
18.5.6.19 AUI-to-MAU DO receiver characteristics ... 535
18.5.6.20 AUI circuit termination ... 536
18.5.6.21 MAU-to-AUI mechanical connections ... 536
18.5.6.22 MAU reliability ... 537
18.5.6.23 Power consumption ... 537
18.5.6.24 PLS–PMA requirements ... 537
18.5.6.25 signal_quality_error message (SQE) ... 537
18.5.6.26 Environmental requirements ... 538
18.5.6.27 MAU labeling ... 538

19. Layer Management for 10 Mb/s baseband repeaters ... 539

19.1 Introduction ... 539
19.1.1 Scope ... 539
19.1.2 Relationship to objects in IEEE Std 802.1F-1993 ... 539
19.1.3 Definitions ... 539
19.1.4 Symbols and abbreviations ... 539
19.1.5 Management model ... 540
19.2 Managed objects ... 541
19.2.1 Introduction ... 541
19.2.2 Overview of managed objects ... 541
19.2.2.1 Text description of managed objects ... 541
19.2.2.2 Port functions to support management ... 541
19.2.2.3 Containment ... 543
19.2.2.4 Naming ... 544
19.2.2.5 Packages and capabilities ... 544
19.2.3 Repeater managed object class ... 546
19.2.3.1 Repeater attributes ... 546
19.2.3.1.1 aRepeaterID ... 546
19.2.3.1.2 aRepeaterGroupCapacity ... 546
19.2.3.1.3 aGroupMap ... 546
19.2.3.1.4 aRepeaterHealthState ... 546
19.2.3.1.5 aRepeaterHealthText ... 547
19.2.3.1.6 aRepeaterHealthData ... 547
19.2.3.1.7 aTransmitCollisions ... 547
19.2.3.2 Repeater actions ... 547
19.2.3.2.1 acResetRepeater ... 547
19.2.3.2.2 acExecuteNonDisruptiveSelfTest ... 548
19.2.3.3 Repeater notifications ... 548
19.2.3.3.1 nRepeaterHealth ... 548
19.2.3.3.2 nRepeaterReset ... 549
19.2.3.3.3 nGroupMapChange ... 549
19.2.4 ResourceTypeID Managed Object Class ... 549
19.2.5 Group managed object class ... 549
19.2.5.1 Group attributes ... 549
19.2.5.1.1 aGroupID ... 549
19.2.5.1.2 aGroupPortCapacity ... 550
19.2.5.1.3 aPortMap ... 550
19.2.5.2 Group Notifications ... 550
19.2.5.2.1 nPortMapChange ... 550
19.2.6 Port managed object class ... 550
19.2.6.1 Port Attributes ... 550
19.2.6.1.1 aPortID ... 550
