IEEE Standards documents are developed within the Technical Committees of the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Board. Members of the committees serve voluntarily and without compensation. They are not necessarily members of the Institute. The standards developed within IEEE represent a consensus of the broad expertise on the subject within the Institute as well as those activities outside of IEEE which have expressed an interest in participating in the development of the standard.

Use of an IEEE Standard is wholly voluntary. The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least once every five years for revision or reaffirmation. When a document is more than five years old, and has not been reaffirmed, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with IEEE. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments.

Interpretations: Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of all concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason IEEE and the members of its technical committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration.

Comments on standards and requests for interpretations should be addressed to:

Foreword

(This Foreword is not a part of IEEE Std 85-1973, Test Procedure for Airborne Sound Measurements on Rotating Electric Machinery.)

This document is a revision of IEEE Std 85-1965, Test Procedure for Airborne Noise Measurements on Rotating Electric Machinery.

The Institute wishes to acknowledge its indebtedness to those who have so freely given of their time and knowledge and have conducted experimental work on which many of its publications are based.

This standard was prepared by the Noise Working Group of the IEEE Rotating Machinery Committee and at the time of approval had the following membership:

R. G. Bartheld, *Chairman*

W. Scott Bayless
W. Billington
L. W. Buchanan
R. X. French
A. R. Gilmour
W. J. Glod

H. B. Hollowood, *Secretary*

R. H. Lee
R. T. McGregor
D. F. Muster
R. L. Wall
P. Weihsmann
F. Wells

Comments are invited on this publication as well as suggestions for additional material that should be included. These should be addressed to:

SECTION	PAGE
1. Scope	9
2. Definitions and Terms	9
2.1 Sound Pressure Level	9
2.2 A-Weighted Sound Level	9
2.3 Octave Band Level	9
2.4 Sound Power Level	9
2.5 A-Weighted Sound Power Level	10
2.6 Prescribed Surface	10
2.7 Equivalent Radius	10
2.8 Reference Distance	10
2.9 Reference Radius	10
2.10 Background Level	10
2.11 Mean Sound Pressure Level or Mean Sound Level	10
2.12 Machine	10
2.12.1 Small Machine	10
2.12.2 Medium Machine	10
2.12.3 Large Machine	10
3. Installation and Operation	11
3.1 Machine Mounting	11
3.1.1 Field Installation	11
3.1.2 Test Mounting	11
3.1.3 Multiunit Machines	11
3.2 Operating Condition	11
3.2.1 No-Load Test	11
3.2.2 Full-Load Test	11
4. Measuring Instruments	11
4.1 Sound Level Meter	11
4.2 Band Filter Networks	11
4.3 Level Recorder	11
4.4 Sound Measuring Systems	11
4.4.1 Microphone	11
4.4.2 Interconnecting Cable	11
4.4.3 Microphone Signal Amplifier	12
4.4.4 Frequency Analyzer	12
4.5 Calibration	12
4.6 System Check Out	12
4.7 Electrical Characteristic Measurement Instrumentation	12
5. Test Environment	12
5.1 Free Field Over a Reflecting Plane	12
5.1.1 Free-Field Conditions in a Test Room	12
5.1.2 Other Free-Field Situations	12
5.2 Reverberant Field	12
5.3 Semireverberant Field	13
5.4 Test to Determine Type of Environment	13
5.5 Background Level	13
6. Quantities to Be Reported	13
6.1 Standard	13
6.2 Additional	13

SECTION	PAGE
7. Methods of Measurement	13
7.1 Free Field Over a Reflecting Plane	13
7.1.1 Location of Measurement Points	13
7.1.1.1 Small Machines	14
7.1.1.2 Medium Machines	14
7.1.1.3 Large Machines	14
7.1.2 Test Procedure	14
7.1.3 Measurement Corrections	15
7.1.4 Calculation of the Mean Level	15
7.1.5 Calculation of A-Weighted Mean Sound Level Using Octave Band Mean Sound Pressure Levels	15
7.1.6 Calculation of the A-Weighted Mean Sound Level at a Reference Distance for the Condition of a Free Field Over a Reflecting Plane	15
7.1.7 Calculation of the A-Weighted Sound Power Level	16
7.1.8 Calculation of Octave Band Sound Pressure Level at the Reference Distance for the Condition of a Free Field Over a Reflecting Plane	16
7.2 Reverberant Field	17
7.2.1 Reference Sound Source	17
7.2.2 Location of Measurement Points	17
7.2.3 Test Procedure	17
7.2.4 Measurement Corrections	17
7.2.5 Calculation of Mean Level	17
7.2.6 Calculation of the Sound Power Level in Octave Bands	17
7.2.7 Calculation of the Mean Sound Pressure Levels in Octave Bands at the Reference Distance for the Conditions of a Free Field Over a Reflecting Plane	18
7.2.8 Calculation of the A-Weighted Mean Sound Level at a Reference Distance for the Condition of a Free Field Over a Reflecting Plane	18
7.2.9 Calculation of A-Weighted Sound Power Level	18
7.3 Semireverberant Field	18
7.3.1 Reference Sound Source	18
7.3.2 Location of Measurement Points	18
7.3.3 Test Procedure	18
7.3.4 Measurement Corrections	18
7.3.5 Calculation of the Mean Level	18
7.3.6 Calculation of the Sound Power Level in Octave Bands	18
7.3.7 Calculation of the Mean Sound Pressure Levels in Octave Bands at the Reference Distance for Conditions of a Free Field Over a Reflecting Plane	19
7.3.8 Calculation of the A-Weighted Mean Sound Level at the Reference Distance for the Condition of a Free Field Over a Reflecting Plane	19
7.3.9 Calculation of A-Weighted Sound Power Level	19
8. Test Report	19
