IEEE Standard for Zinc-Coated Ferrous Lag Screws for Overhead Line Construction

Sponsor

**Transmission and Distribution Committee
of the
IEEE Power Engineering Society**

Approved 14 June 2001

IEEE-SA Standards Board

Abstract: Zinc-coated steel lag screws of the fetter drive, gimlet point, and twist drive types commonly used in overhead line construction are covered in this standard.

Keywords: Cold bend test, fetter drive, gimlet point, lag screws, twist drive, zinc-coated.

No part of this publication may be reproduced in any form, in an electronic retrieval system or otherwise, without the prior written permission of the publisher.

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

Use of an IEEE Standard is wholly voluntary. The IEEE disclaims liability for any personal injury, property or other damage, of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance upon this, or any other IEEE Standard document.

The IEEE does not warrant or represent the accuracy or content of the material contained herein, and expressly disclaims any express or implied warranty, including any implied warranty of merchantability or fitness for a specific purpose, or that the use of the material contained herein is free from patent infringement. IEEE Standards documents are supplied “**AS IS.**”

The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least every five years for revision or reaffirmation. When a document is more than five years old and has not been reaffirmed, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

In publishing and making this document available, the IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity. Nor is the IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing this, and any other IEEE Standards document, should rely upon the advice of a competent professional in determining the exercise of reasonable care in any given circumstances.

Interpretations: Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with IEEE. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Comments on standards and requests for interpretations should be addressed to:

Secretary, IEEE-SA Standards Board

USA

Note: Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents for which a license may be required by an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

The IEEE and its designees are the sole entities that may authorize the use of the IEEE-owned certification marks and/or trademarks to indicate compliance with the materials set forth herein.

Authorization to photocopy portions of any individual standard for internal or personal use is granted by the Institute of Electrical and Electronics Engineers, Inc., provided that the appropriate fee is paid to Copyright Clearance Center. To arrange for payment of licensing fee, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; (978) 750-8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Introduction

(This introduction is not part of IEEE Std C135.3-2001, IEEE Standard for Zinc-Coated Ferrous Lag Screws for Overhead Line Construction.)

This standard covers requirements for various types of zinc-coated steel lag screws for overhead line construction.

Participants

At the time this standard was completed, the Working Group on Pole Line Hardware of the Transmission and Distribution Committee of the IEEE Power Engineering Society had the following membership:

Ronald J. Oedemann, *Chair*

Chris Severs, *Vice-Chair*

Nick Annas
James E. Applequist
Frederick W. Burtelson
Edward Dziedzic
Thomas Evison
John Farrington
Donald G. Heald

Richard W. Hensel
Nunnally Johnson
Ralph O. Jones
Edward A. Kiernozek
Robert O. Kluge
David J. Koury
Keith E. Lindsey

Robert C. Peters
Patrick D. Quinn
Karl F. Reed II
Steven D. Scholfield
Stephen F. Smith
Lewis M. Whisonant
Cary H. Yuan

The following members of the balloting committee voted on this standard:

Richard Aichinger
James E. Applequist
Anthony C. Baker
R. Allen Bernstorff
Nelson G. Bingel
Frederick W. Burtelson
Glenn A. Davidson
Frank A. Denbrock
Nicholas J. DeSantis
Guru Dutt Dhingra

John Farrington
Randall C. Groves
Richard W. Hensel
Magdi F. Ishac
Ralph O. Jones
Robert O. Kluge
Daleep C. Mohla
Yakov Motlis
Ronald J. Oedemann

Mark Ostendorp
Robert G. Oswald
Roger Pandanda
Robert C. Peters
Patrick D. Quinn
Donald Sandell
Neil P. Schmidt
Chris Severs
Mohamed H. Shwehdi
Stephen F. Smith

When the IEEE-SA Standards Board approved this standard on 14 June 2001, it had the following membership:

Donald N. Heirman, *Chair*

James T. Carlo, *Vice Chair*

Judith Gorman, *Secretary*

Satish K. Aggarwal
Mark D. Bowman
Gary R. Engmann
Harold E. Epstein
H. Landis Floyd
Jay Forster*
Howard M. Frazier
Ruben D. Garzon

James H. Gurney
Richard J. Holleman
Lowell G. Johnson
Robert J. Kennelly
Joseph L. Koepfinger*
Peter H. Lips
L. Bruce McClung
Daleep C. Mohla

James W. Moore
Robert F. Munzner
Ronald C. Petersen
Gerald H. Peterson
John B. Posey
Gary S. Robinson
Akio Tojo
Donald W. Zipse

*Member Emeritus

Also included is the following nonvoting IEEE-SA Standards Board liaison:

Alan Cookson, *NIST Representative*
Donald R. Volzka, *TAB Representative*

Andrew D. Ickowicz
IEEE Standards Project Editor
