

American Standard for

Relays Associated with Electric Power Apparatus

SPONSOR
Electrical Standards Committee

Approved March 30, 1950
American Standards Association
Incorporated

An American Standard implies a consensus of those substantially concerned with its scope and provisions. The consensus principle extends to the initiation of work under the procedure of the Association, to the method of work to be followed, and to the final approval of the standard.

An American Standard is intended as a guide to aid the manufacturer, the consumer, and the general public. The existence of an American Standard does not in any respect preclude any party who has approved of the standard from manufacturing, selling, or using products, processes, or procedures not conforming to the standard.

An American Standard defines a product, process, or procedure with reference to one or more of the following: nomenclature, composition, construction, dimensions, tolerances, safety, operating characteristics, performance, quality, rating, certification, testing, and the service for which designed.

Producers of goods made in conformity with an American Standard are encouraged to state on their own responsibility, in advertising, promotion material, or on tags or labels, that the goods are produced in conformity with particular American Standards. The inclusion in such advertising and promotion media or on tags or labels of information concerning the characteristics covered by the standard to define its scope is also encouraged.

Foreword

(This Foreword is not a part of the American Standard for Relays Associated with Electric Power Apparatus, C37.1-1950.)

The standard in this publication is the first revision of the American Standard for Relays Associated with Power Switchgear, C37.1-1937. A proposed revision, dated January 12, 1949, was prepared by the American Institute of Electrical Engineers Relay Committee and then submitted to the American Standards Association, Incorporated. Subsequent work on the proposed standard was carried on by the Sectional Committee on Power Switchgear, C37.

The standard relates only to relays of types directly associated with power switchgear. It does not cover relays of types designed primarily for industrial control, excitation, or governor regulating, telephone, telegraph, traffic signal, or similar purpose.

Suggestions for improvement gained in the use of this standard will always be welcome. They should be sent to the American Standards Association, Incorporated, 70 East 45th Street, New York 17, N. Y. Membership of the Sectional Committee on Power Switchgear, C37, is as follows:

G. SUTHERLAND, *Chairman*

G. S. LUNGE, *Secretary*

Organizations Represented

Name of Representative

American Institute of Electrical Engineers	H. V. NYE F. A. LANE G. SUTHERLAND, <i>Chairman</i> R. C. VAN SICKLE G. S. LUNGE, <i>Secretary</i> C. A. WOODROW (<i>Alt</i>)
Association of American Railroads	S. R. NEGLEY
Electric Light and Power Group	J. H. FOOTE R. T. HENRY OSCAR BAUHAN M. S. OLDACRE L. F. HUNT W. T. SMITH (<i>Alt</i>)
Association of Iron and Steel Engineers	F. W. CRAMER D. I. BOHN (<i>Alt</i>) F. O. SCHNURE (<i>Alt</i>)
National Electrical Manufacturers Association	V. L. COX M. H. HOBBS H. H. RUDD G. V. SMITH C. B. SPRINGER T. G. A. SILLERS
Department of the Army	W. K. CAVE
Tennessee Valley Authority	MERRILL DEMERIT
Bureau of Reclamation	CECIL L. KILLGORE W. A. MORGAN (<i>Alt</i>)

The Relay Subcommittee of Sectional Committee C37, which is directly responsible for this standard, has the following personnel:

H. P. SLEEPER, *Chairman*

V. L. COX
G. B. DODDS

S. C. LEYLAND
G. SUTHERLAND
