An American Standard implies a consensus of those substantially concerned with its scope and provisions. The consensus principle extends to the initiation of work under the procedure of the Association, to the method of work to be followed, and to the final approval of the standard.

An American Standard is intended as a guide to aid the manufacturer, the consumer, and the general public. The existence of an American Standard does not in any respect preclude any party who has approved of the standard from manufacturing, selling, or using products, processes, or procedures not conforming to the standard.

An American Standard defines a product, process, or procedure with reference to one or more of the following: nomenclature, composition, construction, dimensions, tolerances, safety, operating characteristics, performance, quality, rating, certification, testing, and the service for which designed. American Standards are subject to periodic review. They are reaffirmed or revised to meet changing economic conditions and technological progress. Users of American Standards are cautioned to secure the latest editions.

Producers of goods made in conformity with an American Standard are encouraged to state on their own responsibility, in advertising, promotion material, or on tags or labels, that the goods are produced in conformity with particular American Standards. The inclusion in such advertising and promotion media, or on tags or labels, of information concerning the characteristics covered by the standard to define its scope is also encouraged.

Foreword

(This Foreword is not a part of the American Standard Guide Specifications for Alternating-Current Power Circuit Breakers, C37.12-1952.)

This American Standard is one of a series on power circuit breakers and is intended to supplement the American Standards for Alternating-Current Power Circuit Breakers, C37.4-1945 through C37.9-1945, or any subsequent revisions thereof approved by the American Standards Association, Incorporated.

This publication was prepared by the Committee on Electric Switching and Switchgear, Association of Edison Illuminating Companies, and was approved by the Electric Equipment Committee of the Edison Electric Institute and the EEI-AEIC-NEMA Joint Committee on Power Circuit Breakers.

In its present form, this guide was published by the Association of Edison Illuminating Companies with the title, *Specifications for Alternating-Current Power Circuit Breakers* (Second Edition) and became effective July 1, 1950, superseding the First Edition of January 1, 1939.

Suggestions for improvement gained in the use of this standard will be welcome. They should be sent to the American Standards Association, Incorporated, 70 East 45th Street, New York 17, N. Y.

The ASA Sectional Committee on Power Switchgear, C37, which reviewed and approved this standard, now has the following personnel:

V. L. COX, *Chairman*

G. S. LUNGE, *Secretary*

<i>Organization Represented</i>	<i>Name of Representative</i>
American Institute of Electrical Engineers	L. R. GATY F. A. LANE G. S. LUNGE H. V. NYE R. C. VAN SICKLE C. A. WOODROW (<i>Alt</i>)
Association of American Railroads	S. R. NEGLEY
Association of Iron and Steel Engineers	F. O. SCHNURE
Electric Light and Power Group	OSCAR BAUHAN J. H. FOOTE L. F. HUNT R. G. MEYERAND HARRIS BARBER (<i>Alt</i>) H. E. KENT (<i>Alt</i>)
National Electrical Manufacturers Association	V. L. COX M. H. HOBBS T. G. A. SILLERS G. V. SMITH C. B. SPRINGER E. A. WILLIAMS
Tennessee Valley Authority	MERRILL DE MERIT
Department of the Army (<i>Liaison</i>)	WILLIAM K. CAVE
Department of the Interior, Bureau of Reclamation	CECIL L. KILLGORE
Department of the Navy, Bureau of Yards and Docks	C. D. FRIDAY
