IEEE Power and Energy Society

Approved 23 September 2017

IEEE-SA Standards Board

Abstract: Applications to three-phase electrical utility systems are described in this Part VI of the IEEE C62.92™ series. Definitions and considerations related to system grounding where the dominant sources of system energization are current-regulated or power-regulated power conversion devices are provided.

Keywords: current-regulated source, ground-fault overvoltage, grounding, IEEE C62.92.6™, inverter, temporary overvoltage

Important Notices and Disclaimers Concerning IEEE Standards Documents

IEEE documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page, appear in all standards and may be found under the heading “Important Notice” or “Important Notices and Disclaimers Concerning IEEE Standards Documents.”

Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents

IEEE Standards documents (standards, recommended practices, and guides), both full-use and trial-use, are developed within IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (“IEEE-SA”) Standards Board. IEEE (“the Institute”) develops its standards through a consensus development process, approved by the American National Standards Institute (“ANSI”), which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE does not warrant or represent the accuracy or content of the material contained in its standards, and expressly disclaims all warranties (express, implied and statutory) not included in this or any other document relating to the standard, including, but not limited to, the warranties of: merchantability; fitness for a particular purpose; non-infringement; and quality, accuracy, effectiveness, currency, or completeness of material. In addition, IEEE disclaims any and all conditions relating to: results; and workmanlike effort. IEEE standards documents are supplied “AS IS” and “WITH ALL FAULTS.”

Use of an IEEE standard is wholly voluntary. The existence of an IEEE standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

Translations

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE should be considered the approved IEEE standard.

Official statements

A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, or be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position of IEEE.

Comments on standards

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE. However, IEEE does not provide consulting information or advice pertaining to IEEE Standards documents. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to comments or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in revisions to an IEEE standard is welcome to join the relevant IEEE working group.

Comments on standards should be submitted to the following address:

Secretary, IEEE-SA Standards Board
445 Hoes Lane
Piscataway, NJ 08854 USA

Laws and regulations

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

Copyrights

IEEE draft and approved standards are copyrighted by IEEE under US and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, IEEE does not waive any rights in copyright to the documents.

Photocopies

Subject to payment of the appropriate fee, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every 10 years. When a document is more than 10 years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE-SA Website at <http://ieeexplore.ieee.org/> or contact IEEE at the address listed previously. For more information about the IEEE-SA or IEEE's standards development process, visit the IEEE-SA Website at <http://standards.ieee.org>.

Errata

Errata, if any, for all IEEE standards can be accessed on the IEEE-SA Website at the following URL: <http://standards.ieee.org/findstds/errata/index.html>. Users are encouraged to check this URL for errata periodically.

Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE-SA Website at <http://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association

Participants

At the time this IEEE guide was completed, the Application Guide for Neutral Grounding in Electrical Utility Systems (3.5.7) Working Group had the following membership:

Steven Whisenant, *Chair*
Michael Champagne, *Vice Chair*

Robert Allison	Chris Kulig	Arnold Vitols
Michael Comber	Iuda Morar	Reigh Walling
Thomas Field	Caryn Riley	James Wilson
Christine Goldsworthy	Thomas Rozek	Chad Withers
Steven Hensley	Andrew Steffen	Jon Woodworth
Joseph Koepfinger	Keith Stump	Ben York

The following members of the balloting committee voted on this guide. Balloters may have voted for approval, disapproval, or abstention.

William Ackerman	Steven Hensley	Alvaro Portillo
Saleman Alibhay	Charles Henville	Charles Rogers
Curtis Ashton	Lee Herron	Michael Ropp
Thomas Barnes	Werner Hoelzl	Thomas Rozek
Frank Basciano	Robert Hoerauf	Steven Rymsha
Philip Beaumont	Anderson Hoke	Steven Sano
Sirak Belayneh	Soonwook Hong	Bartien Sayogo
Steven Bezner	William Hurst	Robert Schuerger
Thomas Blair	Peter Kelly	Christopher Searles
William Bloethe	Sheldon Kennedy	Kenneth Sedziol
Jens Boemer	Yuri Khersonsky	Robert Seitz
Clarence Bradley	Boris Kogan	Veselin Skendzic
Jeffrey Brogdon	Jim Kulchisky	Jeremy Smith
Gustavo Brunello	Chung-Yiu Lam	Jerry Smith
Demetrio Jr Bucaneg	Raluca Lascu	Gary Smullin
William Byrd	Brian Lydic	Wayne Stec
Paul Cardinal	Reginaldo Maniego	Andrew Steffen
Sean Carr	Barry Mather	Gary Stodter
Michael Champagne	Lee Matthews	Keith Stump
Michael Chirico	Michael Maytum	David Tepen
Robert Christman	Thomas Mc Carthy	Michael Thompson
Randall Crellin	Michael McCarty	Richard Tressler
Matthew Davis	Jerry Murphy	Demetrios Tziouvaras
Mamadou Diong	R. Murphy	Gerald Vaughn
Gary Donner	Ali Naderian Jahromi	John Vergis
Ernest Duckworth	K.R.M. Nair	Sarah Walinga
Rostyslaw Fostiak	Arthur Neubauer	Reigh Walling
Dale Fredrickson	Charles Ngethe	John Wang
Fredric Friend	Paul Nikolich	Daniel Ward
Jalal Gohari	Joe Nims	Steven Whisenant
Edwin Goodwin	Hans-Wo Oertel	Kenneth White
Stephen Grier	Lorraine Padden	Robert White
Randall Groves	Sergio Panetta	James Wilson
Ajit Gwal	Bansi Patel	Jian Yu
Said Hachichi	Subhash Patel	Luis Zambrano
Robert Harris	Howard Penrose	Gaetano Zizzo
	Prasad Pmsvsv	

When the IEEE-SA Standards Board approved this guide on 23 September 2017, it had the following membership:

Jean-Phillipe Faure, *Chair*
Gary Hoffman, *Vice Chair*
John D. Kulick, *Past Chair*
Konstantinos Karachalios, *Secretary*

Chuck Adams
Masayuki Ariyoshi
Ted Burse
Stephen Dukes

*Member Emeritus

Introduction

This introduction is not part of IEEE Std C62.92.6-2017, IEEE Guide for Application of Neutral Grounding in Electrical Utility Systems, Part VI—Systems Supplied by Current-Regulated Sources.

This document is the sixth part of a six-part series of guides on the subject of electric utility system neutral grounding practices and serves as an introduction. When the series was first approved, it replaced IEEE Std 143™-1954, IEEE Guide for Ground-Fault Neutralizers, Grounding of Synchronous Generator Systems, and Neutral Grounding of Transmission Systems. The first part of the series provides an introduction to the subject of neutral grounding and provides basic definitions. The next five parts address a specific part of the utility system to serve as a guide for neutral grounding. This part addresses the particular circumstance of a system predominately energized by current-regulated sources, such as inverters. The six parts are as follows:

- a) IEEE Std C62.92.1, IEEE Guide for the Application of Neutral Grounding in Electrical Utility Systems—Part I: Introduction.
- b) IEEE Std C62.92.2, IEEE Guide for the Application of Neutral Grounding in Electrical Utility Systems—Part II: Grounding of Synchronous Generator Systems.
- c) IEEE Std C62.92.3, IEEE Guide for the Application of Neutral Grounding in Electrical Utility Systems—Part III: Generator Auxiliary Systems.
- d) IEEE Std C62.92.4, IEEE Guide for the Application of Neutral Grounding in Electrical Utility Systems—Part IV: Distribution Systems.
- e) IEEE Std C62.92.5, IEEE Guide for the Application of Neutral Grounding in Electrical Utility Systems—Part V: Transmission and Subtransmission Systems.
- f) IEEE Std C62.92.6, IEEE Guide for the Application of Neutral Grounding in Electrical Utility Systems—Part VI: Systems Supplied by Current-Regulated Sources.

This series of guides is intended for application to three-phase electrical utility systems. They provide definitions and considerations that are general to all types of neutral grounding for electrical utility systems as well as basic considerations of the selection of neutral grounding parameters that will provide for the control of overvoltage and ground-fault current on all parts of three-phase electrical utility systems. They are not intended to be used with the grounding, for example, of industrial systems, which is covered in other guides and standards. These guides and standards should be referenced, when appropriate, to gain a full picture of other grounding practices.

The sources of energization of electrical utility systems have conventionally been rotating generators, which are well characterized as voltage sources in series with predominately inductive impedances. The conventional understanding of system grounding has been based on the assumption that all sources can be characterized as voltage sources. New forms of generation and energy storage are now being interconnected to three-phase electric utility systems via power-electronic conversion devices that are controlled as constant current or constant power devices. Situations where the current- or power-regulated devices become the dominant energization sources for a portion of the utility system can occur. The conventional understanding of system grounding is inadequate to address these situations. This sixth part fulfills the need to re-define and apply the principles of system grounding in the context of these regulated sources.

IEEE Guide for Application of Neutral Grounding in Electrical Utility Systems, Part VI—Systems Supplied by Current-Regulated Sources

1. Overview

1.1 Scope

This guide is intended for application to three-phase electrical utility systems and is Part VI of the IEEE C62.92™ series. This part provides definitions and considerations related to system grounding where the dominant sources of system energization are current-regulated or power-regulated power conversion devices.

1.2 Purpose

This guide defines neutral grounding in the context of current-regulated and power-regulated sources and presents basic considerations of the selection of neutral grounding parameters that will provide for the control of overvoltage on three-phase electrical utility systems in which such sources are dominant.

2. Normative references

The following referenced documents are indispensable for the application of this document (i.e., they must be understood and used, so each referenced document is cited in text and its relationship to this document is explained). For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments or corrigenda) applies.

IEEE Std C62.92.1™, IEEE Guide for the Application of Neutral Grounding in Electrical Utility Systems, Part 1—Introduction.^{1, 2}
