**IESNA Approved Method for
Photometric Testing of Entertainment Lighting
Luminaires Using Incandescent Filament Lamps or
High Intensity Discharge Lamps**

Publication of this Committee
Report has been approved
by the IESNA. Suggestions for
revisions should be directed
to the IESNA.

DISCLAIMER

IESNA publications are developed through the consensus standards development process approved by the American National Standards Institute. This process brings together volunteers representing varied viewpoints and interests to achieve consensus on lighting recommendations. While the IESNA administers the process and establishes policies and procedures to promote fairness in the development of consensus, it makes no guaranty or warranty as to the accuracy or completeness of any information published herein. The IESNA disclaims liability for any injury to persons or property or other damages of any nature whatsoever, whether special, indirect, consequential or compensatory, directly or indirectly resulting from the publication, use of, or reliance on this document.

In issuing and making this document available, the IESNA is not undertaking to render professional or other services for or on behalf of any person or entity. Nor is the IESNA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances.

The IESNA has no power, nor does it undertake, to police or enforce compliance with the contents of this document. Nor does the IESNA list, certify, test or inspect products, designs, or installations for compliance with this document. Any certification or statement of compliance with the requirements of this document shall not be attributable to the IESNA and is solely the responsibility of the certifier or maker of the statement.

Contents

Foreword	1
1.0 Selecting Luminaires	1
2.0 Basic Laboratory Conditions	1
2.1 Stray Light	1
2.2 Ambient Temperatures	1
2.3 Test Lamp Selection and Seasoning	1
2.4 Test Lamp Operation	1
2.5 Test Distance	1
2.6 Electrical Requirements	2
2.6.1 Lamp Regulation	2
2.6.2 Wave Form	2
2.7 Electrical Instrumentation	2
2.7.1 Uncertainties	2
2.7.2 Impedance Limitation	2
2.8 Detectors	3
3.0 Preparation of Equipment for Test	3
3.1 Lamp Orientation	3
3.1.1 Filament Lamps	3
3.1.2 Discharge Lamps	3
3.2 Focusing	3
3.3 Cleaning of Optical Parts	4
4.0 Testing by Goniophotometry	4
4.1 General	4
4.2 Polar Axis Coordinates (Type B)	4
4.3 Positioning the Luminaire	4
4.4 Moving Cell or Mirror Photometer (Type C)	4
4.5 Calibration Procedure and Methods (General)	4
4.5.1 Relative Calibration Method for Lamp and Goniophotometer	4
4.5.2 Absolute Calibration Method	5
4.6 Selection of Angles for Photometric Measurements	5
4.7 Detector Size	5
5.0 Test Requirements for Specific Types of Luminaires	5
5.1 Fresnel Lensed Types, Plano Convex Types, Focusing Scoops, Ellipsoidal Spotlights, and Variable Ellipsoidal Follow Spots	5
5.2 Ellipsoidal Reflector Luminaires	6
5.3 Asymmetric Luminaires	6
5.4 Soft Light Floods	6
5.5 Multiple-lamp Luminaires	6
6.0 Computation of Test Results and Test Report	6
6.1 Photometric Data Processing	6
6.2 Test Report	6
References	7
Annex A — Measurement of Errors Due to the Deviation in System Response from $V(\lambda)$	8
Annex B — Calculation of Illuminance Values for Type B Coordinate System	9
Annex C — Calculation of Lumens	12
Annex D — Glossary	13
