## The Principles of Standardization

In May 1995 the IPC's Technical Activities Executive Committee (TAEC) adopted Principles of Standardization as a guiding principle of IPC's standardization efforts.

### Standards Should:

- Show relationship to Design for Manufacturability (DFM) and Design for the Environment (DFE)
- Minimize time to market
- Contain simple (simplified) language
- Just include spec information
- Focus on end product performance
- Include a feedback system on use and problems for future improvement

### Standards Should Not:

- Inhibit innovation
- Increase time-to-market
- Keep people out
- Increase cycle time
- Tell you how to make something
- Contain anything that cannot be defended with data

## Notice

IPC Standards and Publications are designed to serve the public interest through eliminating misunderstandings between manufacturers and purchasers, facilitating interchangeability and improvement of products, and assisting the purchaser in selecting and obtaining with minimum delay the proper product for his particular need. Existence of such Standards and Publications shall not in any respect preclude any member or nonmember of IPC from manufacturing or selling products not conforming to such Standards and Publication, nor shall the existence of such Standards and Publications preclude their voluntary use by those other than IPC members, whether the standard is to be used either domestically or internationally.

Recommended Standards and Publications are adopted by IPC without regard to whether their adoption may involve patents on articles, materials, or processes. By such action, IPC does not assume any liability to any patent owner, nor do they assume any obligation whatever to parties adopting the Recommended Standard or Publication. Users are also wholly responsible for protecting themselves against all claims of liabilities for patent infringement.

## IPC Position Statement on Specification Revision Change

It is the position of IPC's Technical Activities Executive Committee that the use and implementation of IPC publications is voluntary and is part of a relationship entered into by customer and supplier. When an IPC publication is updated and a new revision is published, it is the opinion of the TAEC that the use of the new revision as part of an existing relationship is not automatic unless required by the contract. The TAEC recommends the use of the latest revision. Adopted October 6, 1998

## Why is there a charge for this document?

Your purchase of this document contributes to the ongoing development of new and updated industry standards and publications. Standards allow manufacturers, customers, and suppliers to understand one another better. Standards allow manufacturers greater efficiencies when they can set up their processes to meet industry standards, allowing them to offer their customers lower costs.

IPC spends hundreds of thousands of dollars annually to support IPC's volunteers in the standards and publications development process. There are many rounds of drafts sent out for review and the committees spend hundreds of hours in review and development. IPC's staff attends and participates in committee activities, typesets and circulates document drafts, and follows all necessary procedures to qualify for ANSI approval.

IPC's membership dues have been kept low to allow as many companies as possible to participate. Therefore, the standards and publications revenue is necessary to complement dues revenue. The price schedule offers a 50% discount to IPC members. If your company buys IPC standards and publications, why not take advantage of this and the many other benefits of IPC membership as well? For more information on membership in IPC, please visit [www.ipc.org](http://www.ipc.org) or call 847/597-2809.

Thank you for your continued support.

## Acknowledgment

Any document involving a complex technology draws material from a vast number of sources across many continents. While the principal members of the IPC Repairability Subcommittee (7-34) of the Product Assurance Committee (7-30) are shown below, it is not possible to include all of those who assisted in the evolution of this standard. To each of them, the members of the IPC extend their gratitude.

### Product Assurance Committee

Chair  
Robert Cooke  
NASA Johnson Space Center

Vice Chair  
Debbie Wade  
Advanced Rework Technology-A.R.T

### Technical Liaison of the IPC Board of Directors

Bob Neves  
Microtek (Changzhou) Laboratories

### Repairability Subcommittee

Chairs  
Daniel Foster  
Missile Defense Agency

Frank Honyotski  
STI Electronics, Inc.

Vice Chairs  
Bruce Hughes  
AMRDEC MS&T EPPT

Nichole C. Thilges  
Raytheon Missile Systems

### Repairability Subcommittee (7-34-CN)

Chair  
Zhe (jacky) Liu  
ZTE Corporation

### Repairability Subcommittee (7-34-EU)

Co-Chairs  
Debbie Wade  
Advanced Rework Technology-A.R.T

Tiberiu Baranyi  
Flextronics Romania SRL

### Repairability Subcommittee

Lawrence Foust  
Kathy L. Johnston  
Randy McNutt  
Mary Muller  
Neil A. Wolford, AbelConn, LLC  
Ross Dillman, ACI Technologies, Inc.  
Constantino Jose Gonzalez, ACME Training & Consulting  
John Vickers, Advanced Rework Technology-A.R.T.  
Debbie Wade, Advanced Rework Technology-A.R.T.  
Fernando Perez Gracia, Airbus Defence & Space  
Claus Molgaard, ALPHA-elektronik A/S  
Sean Stanley Keating, Amphenol Limited (UK)  
Rob W. Mullane, Atek Training Services Ltd.  
Marino G. Verderio, Automotive Lighting SpA  
Chris Jukes, Axis Electronics Ltd.  
Lori F. Miller, BAE Systems  
Agnieszka Ozarowski, BAE Systems  
Gerald Leslie Bogert, Bechtel Plant Machinery, Inc.
