Notice

IPC Technical Resources are designed to serve the public interest by eliminating misunderstandings between manufacturers and purchasers, facilitating interchangeability and improvement of products, and assisting the purchaser in selecting and obtaining the proper product for his particular need with minimum delay. Existence of such shall not in any respect preclude any member or non-member of IPC from manufacturing or selling products not conforming to the Technical Resource. The existence of the Technical Resources shall not preclude their voluntary use by those other than IPC members, whether the resource is to be used either domestically or internationally.

Recommended Technical Resources are adopted by IPC without regard to whether their adoption may involve patents on articles, materials or processes. By such action, IPC does not assume any liability to any patent owner, nor do they assume any obligation whatsoever to parties adopting the recommended Technical Resource. Users are also wholly responsible for protecting themselves against all claims of liabilities for patent infringement.

Conductor Analysis Technologies, Inc. and E. I. DuPont Company developed the material in this technical resource, and IPC has been provided permission to distribute the data to the industry. The effort has been coordinated by the Etch and Strip Subcommittee (4-15) of the Fabrication Processes Committee (4-10) of IPC.
