The Principles of Standardization

In May 1995 the IPC's Technical Activities Executive Committee adopted Principles of Standardization as a guiding principle of IPC's standardization efforts.

Standards Should:

- Show relationship to Design for Manufacturability (DFM) and Design for Engineering (DFE)
- Minimize time to market
- Contain simple (simplified) language
- Just include spec information
- Focus on end product performance
- Include a feedback system on use and problems for future improvement

Standards Should Not:

- Inhibit innovation
- Increase time-to-market
- Keep people out
- Increase cycle time
- Tell you how to make something
- Contain anything that cannot be defended with data

Notice

IPC Standards and Publications are designed to serve the public interest through eliminating misunderstandings between manufacturers and purchasers, facilitating interchangeability and improvement of products, and assisting the purchaser in selecting and obtaining with minimum delay the proper product for his particular need. Existence of such Standards and Publications shall not in any respect preclude any member or nonmember of IPC from manufacturing or selling products not conforming to such Standards and Publication, nor shall the existence of such Standards and Publications preclude their voluntary use by those other than IPC members, whether the standard is to be used either domestically or internationally.

Recommended Standards and Publications are adopted by IPC without regard to whether their adoption may involve patents on articles, materials, or processes. By such action, IPC does not assume any liability to any patent owner, nor do they assume any obligation whatever to parties adopting the Recommended Standard or Publication. Users are also wholly responsible for protecting themselves against all claims of liabilities for patent infringement.

IPC Position Statement on Specification Revision Change

It is the position of IPC's Technical Activities Executive Committee (TAEC) that the use and implementation of IPC publications is voluntary and is part of a relationship entered into by customer and supplier. When an IPC standard/guideline is updated and a new revision is published, it is the opinion of the TAEC that the use of the new revision as part of an existing relationship is not automatic unless required by the contract. The TAEC recommends the use of the latest revision.

Adopted October 6, 1998

Why is there a charge for this standard?

Your purchase of this document contributes to the ongoing development of new and updated industry standards. Standards allow manufacturers, customers, and suppliers to understand one another better. Standards allow manufacturers greater efficiencies when they can set up their processes to meet industry standards, allowing them to offer their customers lower costs.

IPC spends hundreds of thousands of dollars annually to support IPC's volunteers in the standards development process. There are many rounds of drafts sent out for review and the committees spend hundreds of hours in review and development. IPC's staff attends and participates in committee activities, typesets and circulates document drafts, and follows all necessary procedures to qualify for ANSI approval.

IPC's membership dues have been kept low in order to allow as many companies as possible to participate. Therefore, the standards revenue is necessary to complement dues revenue. The price schedule offers a 50% discount to IPC members. If your company buys IPC standards, why not take advantage of this and the many other benefits of IPC membership as well? For more information on membership in IPC, please visit www.ipc.org or call 847/790-5372.

Thank you for your continued support.

IPC-A-142

Specification for Finished Fabric Woven from Aramid for Printed Boards

Developed by the Special Reinforcement Technology Task Group of
the Laminate Base Materials Subcommittee of the Printed Board Base
Materials Committee of IPC

Users of this standard are encouraged to participate in the
development of future revisions.

Acknowledgments

Any standard involving a complex technology draws materials from a vast number of sources. While the principle members of the IPC Special

Reinforcements Technology Task Group are shown below, it is not possible to include all of those who

helped develop this Standard. To each of them, the members of the IPC extend their gratitude.

Special Reinforcements Technology Task Group

Chairman
Chet Guiles
Arlon, Inc.

Laminate Base Materials Subcommittee

Chairman
R. Smedley
Texas Instruments

Printed Board Base Materials Committee

Chairman
J. Paulus
Fortin

Technical Liaison of the IPC Board of Directors

R. Mettler
Circuitwise

Special Note of Appreciation

The IPC would especially like to thank the following individuals who worked diligently and met several times to complete this document:

Chester L. Guiles, Arlon, Inc.
Carl E. Killian, E I DuPont De Nemours & Co.

Joel Murray, Clark-Schwebel Fiber Glass
Dennis J. Vaughan, Clark-Schwebel Fiber Glass
