Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 1116 was prepared by Technical Committee ISO/TC 171, *Document imaging applications*, Subcommittee SC 2, *Application issues*.

This second edition cancels and replaces the first edition (ISO 1116:1975). Specifications relating to unexposed and to imaged microfilms have been excluded in this edition, since they are now dealt with in other specific standards. Minor technical changes have been made to take into account the spools and reels now on the market.

Micrographics — 16 mm and 35 mm microfilm spools and reels — Specifications

1 Scope

This International Standard specifies the dimensions of 16 mm and 35 mm microfilm supply spools and reader reels.

Spools and reels that are an integral component of a cartridge, cassette, or magazine used in microfilm-recording or microfilm-reading equipment are not covered by this standard.

2 Normative references

The following normative documents contain provisions which, through reference in this text, constitute provisions of this International Standard. For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. However, parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. For undated references, the latest edition of the normative document referred to applies. Members of ISO and IEC maintain registers of currently valid International Standards.

ISO 1019:1982, *Cinematography — Spools, daylight loading type for 16 mm motion-picture cameras — Dimensions*.

ISO 3042:1992, *Cinematography — Labelling of containers for raw-stock motion-picture films and magnetic films — Minimum information specifications*.

ISO 3047:1982, *Cinematography — Spool, daylight loading type, for 35 mm motion-picture cameras (capacity 30 m - 100 ft) — Dimensions*.

ISO 6148:1993, *Photography — Film dimensions — Micrographics*.

ISO 6196-4:1998, *Micrographics — Vocabulary — Part 4: Materials and packaging*.

ISO 6199:1991, *Micrographics — Microfilming of documents on 16 mm and 35 mm silver-gelatin type microfilm — Operating procedures*.

ISO 7761-1:—¹⁾, *Micrographics — Single-core cartridge for 16 mm processed microfilm — Dimensions and operational constraints — Part 1: Open-type cartridge*.

ISO 10214:1991, *Photography — Processed photographic materials — Filing enclosures for storage*.

3 Definitions

For the purposes of this International Standard, the definitions given in ISO 6196-4 apply.
