Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 11313 was prepared by Technical Committee ISO/TC 42, *Photography*.

Annexes A and B of this International Standard are for information only.

Introduction

The rapid growth of phototypesetting and scanning technology and the absence of definitive International Standards has resulted in a proliferation of equipment and photographic product sizes.

To minimize this proliferation and to encourage a reduction in the total number of package sizes currently in use, this International Standard lists preferred sizes of disposable cassettes containing film and paper. It is hoped that, with the cooperation of photographic goods and equipment manufacturers, only these preferred sizes will be used in the future.
