
**Protective clothing for automobile racing
drivers — Protection against heat and
flame — Performance requirements and
test methods**

*Vêtements de protection pour pilotes automobiles — Protection contre
la chaleur et le feu — Exigences de performance et méthodes d'essai*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 14460 was prepared by Technical Committee ISO/TC 94, *Personal safety — Protective clothing and equipment*, Subcommittee SC 13, *Protective clothing*.

Annex ZA forms a normative part of this International Standard. Annex A is for information only.

Protective clothing for automobile racing drivers — Protection against heat and flame — Performance requirements and test methods

1 Scope

This International Standard specifies test methods, performance requirements and design parameters for clothing for protection against heat and flame intended for drivers in automobile competitions. This International Standard concerns outer garments, under garments, socks, gloves and balaclava hoods. Shoes and helmets are excluded.

2 Normative references

The following normative documents contain provisions which, through reference in this text, constitute provisions of this International Standard. For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. However, parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. For undated references, the latest edition of the normative document referred to applies. Members of ISO and IEC maintain registers of currently valid International Standards.

ISO 3175-1:1998, *Textiles — Dry-cleaning and finishing — Part 1: Method for assessing the cleanability of textiles and garments*.

ISO 3758:1991, *Textiles — Care labelling code using symbols*.

ISO 4675:1990, *Rubber- or plastics-coated fabrics — Low-temperature bend test*.

ISO 5077:1984, *Textiles — Determination of dimensional change in washing and drying*.

ISO 6330:—¹⁾, *Textiles — Domestic washing and drying procedures for textile testing*.

ISO 9151:1995, *Protective clothing against heat and flame — Determination of heat transmission on exposure to flame*.

ISO 13688:1998, *Protective clothing — General requirements*.

ISO 13935-1:1999, *Textiles — Seam tensile properties of fabrics and made-up textile articles — Part 1: Determination of maximum force to seam rupture using the strip method*.

ISO 15025:—²⁾, *Protective clothing — Protection against heat and flame — Method of test for limited flame spread*.

3 Terms and definitions

For the purposes of this International Standard, the following terms and definitions apply.

¹⁾ To be published. (Revision of ISO 6330:1984)

²⁾ To be published.
