Copper and copper alloys — Terms and definitions — Part 5 : Methods of processing and treatment

Cuivres et alliages de cuivre — Termes de référence et définitions — Partie 5 : Méthodes d'élaboration et de traitement

First edition — 1980-10-01

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 197/5 was developed by Technical Committee ISO/TC 26, *Copper and copper alloys*, and was circulated to the member bodies in May 1978.

It has been approved by the member bodies of the following countries :

Australia	India	South Africa, Rep.of
Belgium	Iran	Spain
Canada	Ireland	Sweden
Chile	Italy	Switzerland
Czechoslovakia	Japan	Turkey
Egypt, Arab Rep. of	Mexico	United Kingdom
Finland	Netherlands	USA
France	Norway	USSR
Germany, F. R.	Poland	Yugoslavia
Hungary	Romania	

No member body expressed disapproval of the document.
