99.95 Unalloyed magnesium ingots — Chemical composition

Lingots en magnésium non allié 99,95 — Composition chimique

First edition — 1980-10-15

UDC 669.721-412

Ref. No. ISO 207-1980 (E)

Descriptors : metal products, ingots, magnesium alloys, chemical composition.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 207 was developed by Technical Committee ISO/TC 79, *Light metals and their alloys*.

It was submitted directly to the ISO Council, in accordance with clause 5.10.1 of part 1 of the Directives for the technical work of ISO. It cancels and replaces ISO Recommendation R 207-1961, which had been approved by the member bodies of the following countries :

Australia	Israel	Spain
Belgium	Italy	Sweden
Canada	Japan	Switzerland
Chile	Netherlands	United Kingdom
France	New Zealand	USA
Germany, F. R.	Poland	USSR
Hungary	Portugal	
India	Romania	

No member body had expressed disapproval of the document.
