Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 3461-1 was prepared jointly by Technical Committee ISO/TC 145, *Graphical symbols*, and Technical Committee IEC/TC 3, *Documentation and graphical symbols*, and is also published as IEC 416 : 1988.

ISO 3461-1 : 1988 and IEC 416 : 1988 cancel and replace ISO 3461 : 1976 and IEC 416 : 1972 which have been harmonized to produce this part of ISO 3461.

ISO 3461 consists of the following parts, under the general title *General principles for the creation of graphical symbols* :

- *Part 1 : Graphical symbols for use on equipment*
- *Part 2 : Graphical symbols for use in technical product documentation*

All standards are subject to revision, and users should note that at the time of publication, the editions of the standards referenced herein were valid. Members of IEC and ISO maintain registers of currently valid International Standards.
