Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 4463-3 was prepared by Technical Committee ISO/TC 59, *Building construction*, Subcommittee SC 4, *Dimensional tolerances and measurement*.

This first edition of ISO 4463-3, together with ISO 4463-1 and ISO 4463-2, cancels and replaces ISO 4463:1979, which has been technically revised.

ISO 4463 consists of the following parts, under the general title *Measurement methods for building — Setting-out and measurement*:

- *Part 1: Planning and organization, measuring procedures, acceptance criteria*
- *Part 2: Measuring stations and targets*
- *Part 3: Check-lists for the procurement of surveys and measurement services*

Annex A of this part of ISO 4463 is for information only.
