Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 5050 was developed by Technical Committee ISO/TC 101, *Continuous mechanical handling equipment*, and was circulated to the member bodies in May 1980.

It has been approved by the member bodies of the following countries :

Australia	Egypt, Arab Rep. of	Norway
Austria	Finland	Poland
Belgium	France	Romania
Brazil	Germany, F. R.	Spain
Chile	India	Sweden
Czechoslovakia	Ireland	United Kingdom
Denmark	Netherlands	

The member body of the following country expressed disapproval of the document on technical grounds :

USSR

This International Standard is based on the work carried out by "Section II-Continuous handling" of the European Mechanical Handling Confederation (FEM).
