Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 5261 was prepared by Technical Committee ISO/TC 10, *Technical drawings, product definition and related documentation*, Subcommittee SC 6, *Mechanical engineering documentation*.

This second edition of ISO 5261 together with ISO 5845-1:1995 cancel and replace ISO 5261:1981, which has been technically revised.

Annex A of this International Standard is for information only.

Introduction

For purposes of uniformity, the figures given in this International Standard are shown in first angle orthographic projection and all the linear dimensions are in millimetres. It is understood that other orthographic projections or units of measure could equally well have been used without prejudice to the principles established. The figures, chosen only to illustrate the text, may be incomplete.
