

Cellulose in dilute solutions — Determination of limiting viscosity number — Part 2 : Method in iron(III) sodium tartrate complex (EWNN_{mod NaCl}) solution

Cellulose en solutions diluées — Détermination de l'indice de viscosité limite — Partie 2 — Méthode utilisant une solution du complexe fer(III)-tartrate de sodium (EWNN_{mod NaCl})

First edition — 1981-08-01

UDC 676.1 : 532.13

Ref. No. ISO 5351/2-1981 (E)

Descriptors : cellulose, tests, determination, viscosity, viscosity index.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 5351/2 was developed by Technical Committee ISO/TC 6, *Paper, board and pulps*, and was circulated to the member bodies in January 1980.

It has been approved by the member bodies of the following countries :

Austria	France	Romania
Belgium	Germany, F.R.	South Africa, Rep. of
Brazil	Hungary	Spain
Chile	India	Sweden
China	Kenya	Turkey
Czechoslovakia	Korea, Rep. of	United Kingdom
Egypt, Arab Rep. of	Norway	USA
Finland	Philippines	

No member body expressed disapproval of the document.

Contents

	Page
0 Introduction	1
1 Scope and field of application	1
2 References	1
3 Principle	1
4 Definitions	1
5 Reagent	2
6 Apparatus	2
7 Pretreatment of test samples	2
8 Procedure	2
9 Calculation	3
10 Test report	3
Annexes	
A Preparation of the iron(III) sodium tartrate complex solution	4
B Pretreatment of bast fibres	5
