Ferroalloys — Experimental methods for checking the precision of sample division

*Ferro-alliages — Méthodes expérimentales de contrôle de la fidélité de la division des
échantillons*

Reference number
ISO 7373 : 1987 (E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 7373 was prepared by Technical Committee ISO/TC 132, *Ferroalloys*.

Users should note that all International Standards undergo revision from time to time and that any reference made herein to any other International Standard implies its latest edition, unless otherwise stated.

Contents

	Page
1 Scope and field of application	1
2 References	1
3 General requirements	1
3.1 Mass of a gross sample	1
3.2 Methods of analysis	1
3.3 Quality characteristic	1
3.4 Number of experiments	1
4 Experimental methods	1
4.1 Selection of experimental methods	1
4.2 Method of division in three or more stages	2
4.3 Method of division in one or two stages	2
5 Data analysis	2
5.1 Precision of method of chemical analysis	2
5.2 Precision of sample division	3
6 Review of experimental results	3
7 Bibliography	5
