FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 900 was developed by Technical Committee ISO/TC 47, *Chemistry*, and was circulated to the member bodies in September 1975.

It has been approved by the member bodies of the following countries :

Austria	Italy	Sweden
Belgium	Mexico	Switzerland
France	Netherlands	Thailand
Germany	Poland	Turkey
Hungary	Romania	United Kingdom
India	South Africa, Rep. of	
Israel	Spain	

No member body expressed disapproval of the document.

This International Standard has also been approved by the International Union of Pure and Applied Chemistry (IUPAC).

It cancels and replaces ISO Recommendation R 900-1968, of which it constitutes a technical revision.
