Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Amendment 1 to ISO/IEC 10021-5:1996 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 33, *Distributed application services*, in collaboration with ITU-T. The identical text is published as ITU-T Rec. X.413/Amd.1.

Introduction

The purpose of this Amendment is as follows:

- to define an extended set of ASN.1 Integer values for MS-security error codes;
- a set of enhancements to change the value of the *MS-retrieval status* attribute;
- missing matching rules for redirection attributes;
- clarification of multi-valued MTS envelope extensions;
- definition of additional correlation attribute for reports;
- clarification of an aspect of attribute creation;
- definition of a new attribute to identify the delivered-message's originator.

The instructions enumerated below identify the reference clause number and then the desired change.
