Partie 6: Spécification de protocole

RECTIFICATIF TECHNIQUE 6

Technical corrigendum 6 to International Standard ISO/IEC 10021-6:1990 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 18, *Document processing and related communication*.

Page 33

Subclause 13.2.1.1.3

Replace "RT-OPEN request primitive" with "RT-OPEN service".

Page 41

Subclause B.2.8 (as modified by Technical Corrigenda 1 and 3)

Add a new paragraph immediately before the paragraph which starts "If the OR-address is a numeric-OR-address":

"If the OR-address contains the common-name attribute, a domain-defined-attribute shall be created with its type component set to "common" (not case sensitive) and its value component copied from the common-name attribute. The common-name attribute shall then be deleted. If the OR-address previously contained four domain-defined-attributes, the OR-address cannot be downgraded."

Subclause B.3.2 (introduced by Technical Corrigendum 1)

Add a new subclause after B.3.2:

"B.3.3 Messages containing Domain-defined-attribute of type "common"

If any **OR-address** in the MTS-APDU received from a 1984 system contains a **domain-defined-attribute** with its type component set to "common" (not case sensitive) then a **common-name** attribute shall be created in the **OR-address** with its value copied from the **domain-defined-attribute** value component, and that **domain-defined-attribute** shall be deleted.

NOTE - After upgrade, the characters will always be drawn from the Printable String repertoire, but may be represented as either a Printable String or a Teletex String."
