Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: Foreword - Supplementary information

The committee responsible for this document is ISO/IEC JTC 1, *Information technology*, Subcommittee SC 29, *Coding of audio, picture, multimedia and hypermedia information*.

Part 3: Audio

AMENDMENT 5: Support for Dynamic Range Control, New Levels for ALS Simple Profile, and Audio Synchronization

1 Changes to the text of ISO/IEC 14496-3:2009

After 0.3.8.4, add:

0.3.9 Audio Synchronization Tool

The audio synchronization tool provides capability of synchronizing multiple contents in multiple devices. Synchronization is done by using audio features (fingerprint) extracted from the content. Neither common clock covering the multiple devices nor way to exchange time-stamps between the devices is required.

In the cover page of Part 3: Audio, replace:

This part of ISO/IEC 14496 contains twelve subparts:

with

This part of ISO/IEC 14496 contains thirteen subparts:

In the cover page of Part 3: Audio, add:

Subpart 13: Audio Synchronization

after

Subpart 12: Scalable lossless coding

In 1.3 Terms and Definitions, add:

1.3.z **Audio Sync**: Audio feature for synchronization

and increase the index-number of subsequent entries

In 1.5.1.1 Audio object type definition, amend Table 1.1 with the updates in the table below:

Object type ID	Audio object type	Gain control	[...]	Remark
0	Null			
[..]	[...]			
43	SAOC			
44	LD MPEG Surround			
45	SAOC-DE			
46	Audio Sync

After 1.5.1.2.40 add the following new subclauses:

1.5.1.2.41 Audio Sync object type

The Audio Sync object type conveys audio feature for multiple media stream synchronization (see ISO/IEC 14496-3 Subpart 13) in the MPEG-4 Audio framework.

In 1.5.2.1 (Profiles), Table 1.3 (Audio Profiles definition), add:

Object type ID	Audio object type	...
...	...	...
43	SAOC	
44	LD MPEG Surround	
45	SAOC-DE	
46	Audio Sync	

In 1.5.2.3 (Levels within the profiles), replace Table 1.13B and notes with:

— **Levels for the ALS Simple Profile**

Table 1.13B — Level for the ALS Simple Profile

Level	Max. number of channels	Max. sampling rate [kHz]	Max. word length [bit]	Max. number of samples per frame	Max. prediction order	Max. BS* stages	Max. MCC** stages
1	2	48	16	4096	15	3	1
2	2	48	24	4096	15	3	1
3	6	48	16	4096	15	3	1
4	6	48	24	4096	15	3	1

* BS: Block switching, ** MCC: Multi-channel coding

The BGMC tool and the RLS-LMS tool are not permitted. Floating-point audio data is not supported.

Insert the following new entries into Table 1.14 "audioProfileLevelIndication values" and adapt the "reserved for ISO use" range accordingly:

0x58	SAOC Dialogue Enhancement Profile	L1
0x59	SAOC Dialogue Enhancement Profile	L2
0x5A	ALS Simple Profile	L2
0x5B	ALS Simple Profile	L3
0x5C	ALS Simple Profile	L4
0x5D to 0x7F	reserved for ISO use	—

After 1.6.2.1.20 add the new subclause as follows:

1.6.2.1.21 AudioSyncFeatureSpecificConfig

Defined in ISO/IEC 14496-3 Subpart 13.

In 1.6.2.2.1 extend Table 1.17 "Audio Object Types" as follows:

-	all other values	Reserved: These values can be used for a further extension of the syntax in a compatible way.
Note: Extension payloads of the type EXT_FILL or EXT_FILL_DATA have to be added to the bitstream payload if the total bits for all audio data together with all additional data are lower than the minimum allowed number of bits in this frame necessary to reach the target bitrate. Those extension payloads are avoided under normal conditions and free bits are used to fill up the bit reservoir. Those extension payloads are written only if the bit reservoir is full.
