## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Amendment 2 to International Standard ISO/IEC 9506-3:1991 was prepared by Technical Committee ISO/TC 184, *Industrial automation systems and integration*.

## Introduction

This Amendment details the textual changes to ISO/IEC 9506-3 to remove the definitions of the conformance classes from the standard and allow them to be specified by an International Standardized Profile (ISP). At the time the standard was developed, the ISP process was not yet in place for specifying profiles. Now that the ISP process has been established, it is appropriate to move the definition of conformance classes (profiles) from the base standard to the ISP document.
