3 Definitions	1
4 The role of managers	1
5 The functions of software documentation	2
5.1 Communication to management	2
5.2 Task-to-task communication	2
5.3 Quality assurance	2
5.4 Instruction and reference	2
5.5 Software support	2
5.6 Historical reference	2
6 Establishing documentation policy	2
7 Establishing documentation standards and guidelines	3
7.1 Selecting a software lifecycle model	3
7.2 Defining document types and content	3
7.3 Defining document quality	4
7.4 Defining document formats	4
7.5 Defining a document identification system	5
8 Establishing documentation procedures	5
9 Allocating resources to documentation	5
9.1 People	5
9.2 Facilities	5
9.3 Funding	5
10 Documentation planning	5
Annex A Checklists for software documentation management	
A.1 Policy checklist	7
A.2 Standards checklist	7
A.3 Procedures checklist	7
A.4 Project planning checklist	7

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) together form a system for worldwide standardization as a whole. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The main task of a technical committee is to prepare International Standards but in exceptional circumstances, the publication of a technical report of one of the following types may be proposed:

- type 1, when the necessary support within the technical committee cannot be obtained for the publication of an International Standard, despite repeated efforts;
- type 2, when the subject is still under technical development requiring wider exposure;
- type 3, when a technical committee has collected data of a different kind from that which is normally published as an International Standard ("state of the art", for example).

Technical reports of types 1 and 2 are subject to review within three years of publication, to decide whether they can be transformed into International Standards. Technical reports of type 3 do not necessarily have to be reviewed until the data they provide are considered to be no longer valid or useful.

ISO/IEC TR 9294, which is a technical report of type 3, was prepared by ISO/IEC JTC 1, *Information technology*.

Introduction

Documentation is required for all stages of the software lifecycle. As a result, the preparation and maintenance of documentation constitutes a necessary and continuous effort from the inception of the software through to its disposal. Documentation begins with the initiation of a software project and continues with the design, development, testing, installation, use, modification and enhancement of the software. The documentation process can only be regarded as having ended when the software comes to the end of its life.

Documentation is essential for the success of any software development project, and the production of documentation requires the commitment of time, effort and money. It is the responsibility of management to ensure the effective deployment of these resources, recognizing the importance of documentation to the quality and success of the software product.
