ITU-T E-SERIES RECOMMENDATIONS
TELEPHONE NETWORK AND ISDN

OPERATION, NUMBERING, ROUTING AND MOBILE SERVICES

INTERNATIONAL OPERATION E.100–E.229

OPERATIONAL PROVISIONS RELATING TO CHARGING AND ACCOUNTING IN THE INTERNATIONAL TELEPHONE SERVICE E.230–E.299

UTILIZATION OF THE INTERNATIONAL TELEPHONE NETWORK FOR NON-TELEPHONY APPLICATIONS E.300–E.329

QUALITY OF SERVICE, NETWORK MANAGEMENT AND TRAFFIC ENGINEERING

NETWORK MANAGEMENT E.400–E.489

International service statistics E.400–E.409

International network management E.410–E.419

Checking the quality of the international telephone service E.420–E.489

TRAFFIC ENGINEERING E.490–E.799

Measurement and recording of traffic E.490–E.505

Forecasting of traffic E.506–E.509

Determination of the number of circuits in manual operation E.510–E.519

Determination of the number of circuits in automatic and semi-automatic operation E.520–E.539

Grade of service E.540–E.599

Definitions E.600–E.699

ISDN traffic engineering E.700–E.749

Mobile network traffic engineering E.750–E.799

QUALITY OF TELECOMMUNICATION SERVICES: CONCEPTS, MODELS, OBJECTIVES AND DEPENDABILITY PLANNING E.800–E.899

Terms and definitions related to the quality of telecommunication services E.800–E.809

Models for telecommunication services E.810–E.844

Objectives for quality of service and related concepts of telecommunication services E.845–E.859

Use of quality of service objectives for planning of telecommunication networks E.860–E.879

Field data collection and evaluation on the performance of equipment, networks and services E.880–E.899

ITU-T RECOMMENDATION E.716

USER DEMAND MODELLING IN BROADBAND-ISDN

Summary

This Recommendation deals with the characterization of user demand as manifested at the User-Network Interface (UNI). This Recommendation focuses on those aspects of user demand modelling that are specific to Broadband ISDN using Asynchronous Transfer Mode (ATM), and summarizes Recommendation E.711 (which covers user demand modelling in ISDN), in those aspects that are common for narrow-band and Broadband ISDN.

Source

ITU-T Recommendation E.716 was prepared by ITU-T Study Group 2 (1993-1996) and was approved under the WTSC Resolution No. 1 procedure on the 8th of October 1996.

FOREWORD

ITU (International Telecommunication Union) is the United Nations Specialized Agency in the field of telecommunications. The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of the ITU. The ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Conference (WTSC), which meets every four years, establishes the topics for study by the ITU-T Study Groups which, in their turn, produce Recommendations on these topics.

The approval of Recommendations by the Members of the ITU-T is covered by the procedure laid down in WTSC Resolution No. 1 (Helsinki, March 1-12, 1993).

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.
