PREPUBLISHED RECOMMENDATION

This prepublication is an unedited version of a recently approved Recommendation. It will be replaced by the published version after editing. Therefore, there will be differences between this prepublication and the published version.

FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications, information and communication technologies (ICTs). The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure, e.g., interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU [had/had not] received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database at <http://www.itu.int/ITU-T/ipr/>.

INTERNATIONAL STANDARD ISO/IEC 29177 (201x)

RECOMMENDATION ITU-T H.642.3 (2012)

Information technology – Automatic identification and data capture technique – Identifier resolution protocol for multimedia information access triggered by tag-based identification

Summary

This Recommendation | International Standard specifies the identifier (ID) resolution protocol for multimedia information access triggered by tag-based identification. This ID resolution protocol is used to retrieve the location and access method of the multimedia information associated with an ID.

Keywords

identifier, IRP, resolution, tag-based identification

CONTENTS

	Page
1 Scope	6
2 Normative references	6
2.1 Identical Recommendations International Standards	6
2.2 Additional references	6
3 Definitions	6
3.1 Imported definitions	6
3.2 Additional definitions	7
4 Abbreviations and acronyms	7
5 Overview of the ID resolution protocol	7
6 Application-specific OID resolution process	8
6.1 Overview	8
6.2 OID transformation rules	9
6.3 ID Structure Information	9
6.4 Operation of a client	9
6.5 Format of NAPTR resource record	10
6.6 Operation of application-specific OID resolution servers	10
7 ID resolution process	11
7.1 Overview	11
7.2 Query to ID resolution server	11
7.3 Response from ID resolution server	11
7.4 Configuration of NAPTR resource record	11
7.5 Operation of a client	12
7.6 Operation of ID resolution servers	12
Annex A Configuration and operation of application-specific OID resolution process	13
A.1 Assumption	13
A.2 Configuration of NAPTR resource records	13
A.3 Operation example	14
Annex B Configuration and operation of ID resolution servers	15
Annex C Bibliography	16
