ITU-T RECOMMENDATION M.3610**PRINCIPLES FOR APPLYING THE TMN CONCEPT TO THE
MANAGEMENT OF B-ISDN****Summary**

This Recommendation describes the principles for applying the TMN concept to the maintenance aspect of B-ISDN management. This Recommendation presents terminology definitions, maintenance principles for B-ISDN, and reference models for the management of B-ISDN.

Source

ITU-T Recommendation M.3610 was prepared by ITU-T Study Group 4 (1993-1996) and was approved under the WTSC Resolution N° 1 procedure on the 12th of May 1996.

Keywords

B-ISDN, maintenance, Telecommunications Management Network (TMN).

FOREWORD

ITU (International Telecommunication Union) is the United Nations Specialized Agency in the field of telecommunications. The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of the ITU. Some 179 member countries, 84 telecom operating entities, 145 scientific and industrial organizations and 38 international organizations participate in ITU-T which is the body which sets world telecommunications standards (Recommendations).

The approval of Recommendations by the Members of ITU-T is covered by the procedure laid down in WTSC Resolution No. 1 (Helsinki, 1993). In addition, the World Telecommunication Standardization Conference (WTSC), which meets every four years, approves Recommendations submitted to it and establishes the study programme for the following period.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.
