Supplement 38 to ITU-T Q-series Recommendations

Technical Report TRQ.2600: BICC signalling transport requirements – Capability set 1

Summary

This Supplement to ITU-T Q-series Recommendations is a technical report on the signalling transport requirements needed for support narrowband services via broadband transport technologies. Its scope is limited to the signalling transport of the associated protocols at the call control, bearer control and call bearer control needed to provide this capability across an ATM/IP backbone network for Capability Set 2.

Source

Supplement 38 to ITU-T Q-series Recommendations was prepared by ITU-T Study Group 11 (2001-2004) and approved under the WTSA Resolution 5 procedure on 25 May 2001.

FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications. The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this publication, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this publication may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the publication development process.

As of the date of approval of this publication, ITU had not received notice of intellectual property, protected by patents, which may be required to implement this publication. However, implementors are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database.

Q series – Supplement 38 (05/2001)

iii

Supplement 38 to ITU-T Q-series Recommendations

Technical Report TRQ.2600: BICC signalling transport requirements – Capability set 1

1 Scope

This Supplement provides requirements for the transport of signalling protocols supported by the BICC CS-2 functional model. For interfaces within the BICC functional model, the known requirements are identified to aid in the design of appropriate new transport protocol options.
