SERIES Q: SWITCHING AND SIGNALLING, AND
ASSOCIATED MEASUREMENTS AND TESTS

Framework for interconnection between VoLTE- based network and other networks supporting emergency telecommunications service (ETS)

CAUTION !

PREPUBLISHED RECOMMENDATION

This prepublication is an unedited version of a recently approved Recommendation. It will be replaced by the published version after editing. Therefore, there will be differences between this prepublication and the published version.

FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications, information and communication technologies (ICTs). The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this publication, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this publication is voluntary. However, the publication may contain certain mandatory provisions (to ensure, e.g., interoperability or applicability) and compliance with the publication is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the publication is required of any party.

INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this publication may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the publication development process.

As of the date of approval of this publication, ITU [had/had not] received notice of intellectual property, protected by patents, which may be required to implement this publication. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database at <http://www.itu.int/ITU-T/ipr/>.

Supplement 69 to ITU-T Q-series Recommendations

Framework for interconnection between VoLTE-based network and other networks supporting emergency telecommunications service (ETS)

Summary

This supplement specifies the framework for interconnection between VoLTE-based network and other networks supporting emergency telecommunications service (ETS).

Source and History

None

Keywords

Framework, VoLTE, emergency telecommunications service

Table of Contents

1	Scope.....	3
2	References.....	3
3	Definitions	3
4	Abbreviations and acronyms	4
5	Conventions	4
6	Scenarios in terms of interconnection supporting ETS	4
6.1	Emergency centers connected to CS-PES	4
6.2	Emergency centers connected to PSTN/PLMN interconnecting with IMS	5
6.3	Emergency centers connected to PSTN/PLMN interconnecting with IMS via CS-PESs.....	5
7	Interconnection framework supporting ETS	6
8	Signalling requirements for interconnection of VoLTE-based network and other networks.....	7
9	Security considerations	8
	Bibliography.....	9
