TELEGRAPH SWITCHING INTERNATIONAL TELEX SERVICE

TECHNICAL REQUIREMENTS FOR INTERWORKING BETWEEN THE INTERNATIONAL TELEX SERVICE AND THE VIDEOTEX SERVICE

ITU-T Recommendation U.206

(Previously "CCITT Recommendation")

FOREWORD

The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of the International Telecommunication Union. The ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Conference (WTSC), which meets every four years, established the topics for study by the ITU-T Study Groups which, in their turn, produce Recommendations on these topics.

ITU-T Recommendation U.206 was prepared by the ITU-T Study Group IX (1988-1993) and was approved by the WTSC (Helsinki, March 1-12, 1993).

NOTES

1 As a consequence of a reform process within the International Telecommunication Union (ITU), the CCITT ceased to exist as of 28 February 1993. In its place, the ITU Telecommunication Standardization Sector (ITU-T) was created as of 1 March 1993. Similarly, in this reform process, the CCIR and the IFRB have been replaced by the Radiocommunication Sector.

In order not to delay publication of this Recommendation, no change has been made in the text to references containing the acronyms "CCITT, CCIR or IFRB" or their associated entities such as Plenary Assembly, Secretariat, etc. Future editions of this Recommendation will contain the proper terminology related to the new ITU structure.

2 In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

1	Introduction	1
2	Basic interworking service	1
2.1	General	1
2.2	Access methods for interworking	1
3	Telex-to-Videotex direction	2
3.1	One-stage selection	2
3.2	Two-stage selection	3
4	Interworking in the Videotex-to-telex direction	4
4.1	Delivery procedure to telex from a one-stage Telex/Videotex Conversion Facility (VTXCF)	4
4.2	Delivery procedure to telex from a two stage Telex/Videotex conversion facility (VTXCF)	5
4.3	Notifications to the Videotex user	6
Annex A	– Reactions to abnormal conditions during text input from telex	6
A.1	The telex subscriber pauses during input of address information (applicable for two-stage access only)	6
A.2	The telex subscriber pauses during or before input of his message	6
A.3	The telex subscriber sends a WRU signal to the VTXCF during text input	6
A.4	The telex subscriber sends text after an End Of Transaction (EOT) signal (applicable for two-stage access only)	7
A.5	The telex subscriber clears after an End Of Transaction (EOT) signal before he receives the Input Message Acknowledgement (IMA) signal (applicable for two-stage access only)	7
A.6	The telex subscriber sends combinations 6, 7 or 8 in figure case	7
A.7	The telex subscriber sends combination 10 in figure case (“BELL”)	7
A.8	Storage capacity overflow in the VTXCF	7
