Foreword

This translation has been made based on the original Japanese Industrial Standard established by the Minister of Economy, Trade and Industry through deliberations at the Japanese Industrial Standards Committee according to the proposal for establishment of Japanese Industrial Standard submitted by Japan Ferroalloy Association (JFA)/ Japanese Standards Association (JSA) with the draft being attached, based on the provision of Article 12 Clause 1 of the Industrial Standardization Law.

Consequently **JIS G 1311**:1998 has been withdrawn and partially replaced with this Standard.

This **JIS** document is protected by the Copyright Law.

Attention is drawn to the possibility that some parts of this Standard may conflict with patent rights, applications for a patent after opening to the public or utility model rights. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying any of such patent rights, applications for a patent after opening to the public or utility model rights.

JIS G 1311 series consists of the following seven parts under the general title “*Method for chemical analysis of ferromanganese*”:

Part 1: Determination of manganese content

Part 2: Determination of carbon content

Part 3: Determination of silicon content

Part 4: Determination of phosphorus content

Part 5: Determination of sulfur content

Part 6: Determination of boron content

Part 7: Determination of nitrogen content
