Foreword

This translation has been made based on the original Japanese Industrial Standard established by the Minister of Economy, Trade and Industry through deliberations at the Japanese Industrial Standards Committee according to the proposal for establishment of Japanese Industrial Standard submitted by the Japan Ferroalloy Association (JFA)/Japanese Standards Association (JSA) with the draft being attached, based on the provision of Article 12 Clause 1 of the Industrial Standardization Law.

Consequently **JIS G 1312:1998** has been withdrawn and partially replaced with this Standard.

This **JIS** document is protected by the Copyright Law.

Attention is drawn to the possibility that some parts of this Standard may conflict with a patent right, application for a patent after opening to the public or utility model right. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying the patent right, application for a patent after opening to the public or utility model right.

JIS G 1312 series consists of the following 6 parts under the general title "*Method for chemical analysis of ferrosilicon*":

Part 1: Methods for determination of silicon content

Part 2: Methods for determination of carbon content

Part 3: Methods for determination of phosphorus content

Part 4: Methods for determination of sulfur content

Part 5: Methods for determination of aluminium content

Part 6: Methods for determination of titanium content
