7.7 Calculation	6

Foreword

This translation has been made based on the original Japanese Industrial Standard established by the Minister of Economy, Trade and Industry through deliberations at the Japanese Industrial Standards Committee according to the proposal of establishing a Japanese Industrial Standard submitted by Japan Ferroalloy Association (JFA)/Japanese Standards Association (JSA) with a draft being attached, based on the provision of Article 12 Clause 1 of the Industrial Standardization Law.

Consequently, **JIS G 1322 : 2006** has been withdrawn, one of the separated parts of which is replaced with this Standard.

This **JIS** document is protected by the Copyright Law.

Attention is drawn to the possibility that some parts of this Standard may conflict with a patent right, application for a patent after opening to the public, utility model right or application for registration of utility model after opening to the public which have technical properties. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying the patent right, application for a patent after opening to the public, utility model right or application for registration of utility model after opening to the public which have the said technical properties.

JIS G 1322 consists of the following 7 parts under the general title "*Methods for chemical analysis of metallic silicon*" :

Part 1: Methods for determination of silicon content

Part 2: Methods for determination of carbon content

Part 3: Methods for determination of phosphorus content

Part 4: Methods for determination of sulfur content

Part 5: Methods for determination of iron content

Part 6: Methods for determination of aluminium content

Part 7: Methods for determination of calcium content
