Foreword

This translation has been made based on the original Japanese Industrial Standard revised by the Minister of Economy, Trade and Industry through deliberations at the Japanese Industrial Standards Committee as the result of proposal for revision of Japanese Industrial Standard submitted by The Japan Magnesium Association (JMA) / Japanese Standards Association (JSA) with the draft being attached, based on the provision of Article 12 Clause 1 of the Industrial Standardization Law applicable to the case of revision by the provision of Article 14.

Consequently **JIS H 2150 : 1998** is replaced with this Standard.

This revision has been made based on **ISO 8287 : 2000 *Magnesium and magnesium alloys—Unalloyed magnesium—Chemical composition*** for the purpose of making it easier to compare this Standard with International Standard; to prepare Japanese Industrial Standard conforming with International Standard; and to propose a draft of an International Standard which is based on Japanese Industrial Standard.

Attention is drawn to the possibility that some parts of this Standard may conflict with a patent right, application for a patent after opening to the public, utility model right or application for registration of utility model after opening to the public which have technical properties. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying the patent right, application for registration of utility model after opening to the public which have the said technical properties.

Date of Establishment: 1961-03-01

Date of Revision: 2006-03-25

Date of Public Notice in Official Gazette: 2006-03-27

Annex (informative) Comparison table between JIS and corresponding
International Standard 5

Magnesium ingots

Introduction This Japanese Industrial Standard has been prepared based on the second edition of **ISO 8287** *Magnesium and magnesium alloys—Unalloyed magnesium—Chemical composition* published in 2000 with some modifications of the technical contents.

The portions given sidelines or dotted underlines are the matters modified from the original International Standard. A list of modifications with explanations is given in Annex.

1 Scope This Standard specifies magnesium ingots (hereafter referred to as “ingot”).

NOTE : The International Standard corresponding to this Standard is as follows.

In addition, symbols which denote the degree of correspondence in the contents between the relevant International Standard and **JIS** are **IDT** (identical), **MOD** (modified), and **NEQ** (not equivalent) according to **ISO/IEC Guide 21**.

ISO 8287 : 2000 *Magnesium and magnesium alloys—Unalloyed magnesium—Chemical composition* (MOD)

2 Normative references The following standards contain provisions which, through reference in this text, constitute provisions of this Standard. The most recent editions of the standards (including amendments) indicated below shall be applied.

JIS H 0321	<i>General rules for inspection of non-ferrous metal materials</i>
JIS H 1322	<i>Method for emission spectrochemical analysis of magnesium ingot</i>
JIS H 1332	<i>Method for determination of aluminium in magnesium and magnesium alloys</i>
JIS H 1333	<i>Method for determination of zinc in magnesium and magnesium alloys</i>
JIS H 1334	<i>Method for determination of manganese in magnesium and magnesium alloys</i>
JIS H 1335	<i>Method for determination of silicon in magnesium and magnesium alloys</i>
JIS H 1336	<i>Method for determination of copper in magnesium and magnesium alloys</i>
JIS H 1337	<i>Method for determination of nickel in magnesium and magnesium alloys</i>
JIS H 1338	<i>Method for determination of iron in magnesium and magnesium alloys</i>
