Foreword

This translation has been made based on the original Japanese Industrial Standard revised by the Minister of Economy, Trade and Industry through deliberations at the Japanese Industrial Standards Committee as the result of proposal for revision of Japanese Industrial Standard submitted by Japan Assistive Products Association (JASPA) with the draft being attached, based on the provision of Article 12 Clause 1 of the Industrial Standardization Law applicable to the case of revision by the provision of Article 14.

Consequently **JIS T 0901 : 2005** is replaced with this Standard.

This **JIS** document is protected by the Copyright Law.

Attention is drawn to the possibility that some parts of this Standard may conflict with a patent right, application for a patent after opening to the public or utility model right. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying the patent right, application for a patent after opening to the public or utility model right.

Guidelines for older persons and persons with disabilities— Information presentation using electronic guiding and wayfinding system

Introduction

This Japanese Industrial Standard was established in 2005 and has gone through one revision to this day. In order to correspond to the use situation in Japan, it is revised this time by conducting the proving test.

Further, no International Standard corresponding to this Standard has been established at this point.

1 Scope

This Standard specifies the user terminal and the method for information presentation when mainly the user such as an older person and a person with disabilities (hereafter referred to as "user") moves using the electronic guiding and wayfinding system.

This Standard is applied in the following cases.

- a) In the case where the movement to the destination following the guidance information from the user terminal or the installation device is performed (hereafter referred to as "guidance") using attention information and location information as necessary
- b) In the case where the movement to the destination referring to the landmark information from the user terminal or the installation device is performed (hereafter referred to as "guiding") using attention information and location information as necessary

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this Standard. The most recent editions of the standards (including amendments) indicated below shall be applied.
