- Additional Rule

This standard regulates the needed liquid amount testing method for disk brake caliper assembly (Caliper assembly from now) that performs normally in passenger car.

This standard is to research needed liquid amount, which is a basic performance of caliper assembly.

3.1 Brake system condition : Each part of brake system shall be as followings when testing.

- (1) Use new **genuine** parts for pad or disk and brake oil when starting the test.
- (2) Assemble **brake** instrument and system, as a standard option, with normally operating parts. It can be changed if needed.

3.2 Testing Equipment: Needed equipment and instrument shall be as following.

(Refer to the figure.)
