MODEL CLAUSES FOR CIVIL ENGINEERING WORKS

SECTION 76

GENERAL REQUIREMENTS FOR EMBEDDED RETAINING WALLS

NOTES TO SPECIFIER:

These notes do not form part of the Specification.

General

76.1 Sections 76 - 79 (Embedded retaining walls) provide a specification for works based on the "ICE Specification for piling and embedded retaining walls" (2nd Edition, 2007) hereinafter referred to as the ICE Specification. The Model Clauses in these Sections are qualifications, amendments or additions to the ICE Specification.

The specifier should refer to the ICE Specification including the applicable guidance notes; BS EN 1997-1 and the NA to BS EN 1997-1; and Non-Contradictory Complementary Information in BS 8002 prior to compiling the Contract Specification Appendix Clauses for works.

Particular specifications

76.2 Within the various sections of the ICE Specification reference is made to the Particular Specification. The Model Clauses in Sections 76 – 79 should be considered as providing the Particular Specification in respect of:

- *amendments, qualifications, deletions or additions to the ICE Specification,*
- *reference to relevant Contract Drawings,*
- *particular requirements for embedded retaining walls in a railway environment.*

No Model Clauses have been provided that could be considered as providing a Particular Specification for:

- *site specific requirements,*
- *embedded retaining wall specific requirements,*
- *specific requirements for pile testing.*

The specifier should determine such requirements for inclusion as the Particular Specification Appendix Clauses with reference to the relevant section and corresponding guidance notes in the ICE Specification.
