Since 1944, NSF International (NSF) has stood at the forefront of global efforts to improve human and planet health.

As an independent, internationally recognized organization, we play a pivotal role in the development of robust public health standards. NSF engages in the rigorous testing, auditing, and certification of an array of products and services. The NSF mark serves as an emblem of assurance, signifying to consumers, retailers, and regulatory bodies that our certified products meet or exceed requisite standards.

This standard is subject to revision.
Contact NSF to confirm this revision is current.

Users of this standard may request clarifications and interpretations, or propose revisions by contacting:

Chair, Joint Committee on Drinking Water Additives – System Components

Drinking Water System Components – Lead Content

Standard Developer
NSF

ICS 13.060.20

Designated as an ANSI Standard by the American National Standards Institute
Designated as a National Standard of Canada by the Standards Council of Canada
June 11, 2024

Prepared by
The NSF Joint Committee on Drinking Water Additives

Recommended for adoption by
The NSF Public Health Council

Adopted by
NSF
October 2010

Revised July 2011
Revised April 2022

Revised March 2016
Revised December 2024

Revised November 2020

Published by
NSF, PO Box 130140, Ann Arbor, Michigan 48113-0140, USA

Disclaimers¹

NSF, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. NSF shall not be responsible to anyone for the use of or reliance upon this standard by anyone. NSF shall not incur any obligation or liability for damages, including consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this standard. It is the responsibility of the user of this standard to judge the suitability of the ANS/NSC for the user's purpose.

Participation in NSF standards development activities by regulatory agency representatives (federal, state, or local) shall not constitute their agency's endorsement of NSF or any of its standards.

Preference is given to the use of performance criteria measurable by examination or testing in NSF standards development when such performance criteria may reasonably be used in lieu of design, materials, or construction criteria.

A dual-unit technical standard may use both non-SI (English System of Measurement) and SI units of measure (SI is the International System of Units, commonly known as the metric system). Unless stated otherwise, whichever system provided in the primary position is the official and normative unit value. Units may be provided in parentheses immediately following the primary units when required for clarity or informational purposes. As such, these values stated are not interchangeable, should be regarded separately, and used independently. Interchanging values from both unit systems may result in errors.

The illustrations, if provided, are intended to assist in understanding their adjacent standard requirements. However, the illustrations may not include all requirements for a specific product or unit, nor do they show the only method of fabricating such arrangements. Such partial drawings shall not be used to justify improper or incomplete design and construction.

At the time of this publication, examples of programs and processes were provided for general guidance. This information is given for the convenience of users of this standard and does not constitute an endorsement by NSF. Equivalent programs and processes may be used.

Unless otherwise referenced, the annexes are not considered an integral part of NSF standards. The annexes are provided as general guidelines to the manufacturer, regulatory agency, user, or certifying organization.

A National Standard of Canada is a standard developed by a Standards Council of Canada (SCC) accredited standards development organization, in compliance with requirements and guidance set out by the SCC. More information on National Standards of Canada can be found at <www.scc.ca>.

SCC is a Crown corporation within the portfolio of Innovation, Science and Economic Development (ISED) Canada. With the goal of enhancing Canada's economic competitiveness and social well-being, SCC leads and facilitates the development and use of national and international standards. SCC also coordinates Canadian participation in standards development, and identifies strategies to advance Canadian standardization efforts.

Accreditation services are provided by SCC to various customers, including product certifiers, testing laboratories, and standards development organizations. A list of SCC programs and accredited bodies is publicly available at <www.scc.ca>.

¹ The information contained in this disclaimer is not part of this American National Standard (ANS) and has not been processed in accordance with ANSI's requirements for an ANS. Therefore, this disclaimer may contain material that has not been subjected to public review or a consensus process. In addition, it does not contain requirements necessary for conformance to the standard.

Abbreviations

The following table is provided as a reference for unit abbreviations for common forms of measurement used within NSF documents.

Time	second	s
	minute	min
	hour	h
	day	d
	week	wk
	month	mo
	year	yr
Length	inch	in
	foot	ft
	yard	yd
	micrometer	µm
	nanometer	nm
	millimeter	mm
	centimeter	cm
	meter	m
	kilometer	km
Liquid Measure	milliliter	mL
	liter	L
	liters per day	LPD
	liters per minute	LPM
	ounce	oz
	pint	pt
	quart	qt
	gallon	gal
	gallons per minute	GPM
	gallons per day	GPD
Weight	microgram	µg
	picogram	pg
	nanogram	ng
	milligram	mg
	centigram	cg
	gram	g
	kilogram	kg
	pound	lb
	ton	t
	metric ton	mt

Table of contents

1	General	1
1.1	Purpose	1
1.2	Scope	1
1.3	Normative references	1
1.4	Significant figures	2
2	Definitions	2
3	General requirements	2
3.1	All components less than or equal to 0.25%	2
3.2	Any components greater than 0.25%	2
3.3	Restriction on the use of lead containing materials	3
4	Weighted average lead content calculation	3
4.1	Component surface areas and lead content	3
4.2	Formula for determining weighted average lead content	3
5	Percentage lead content of water contact surfaces	4
5.1	Liners	4
5.2	Coatings	4
5.3	Lead removal technologies	4
6	Lead content verification testing	4
6.1	Lead content testing	4
7	Analytical procedures for determining percent lead content of materials	5
7.1	Lead content screening	5
7.2	Lead content analysis of materials	5
	Informative Annex 1 Example weighted average lead content calculation	7
