NSF Protocol P376

Mechanical Water Filtration Systems for Microbial Reduction in Health Care Settings

Protocol Developer
NSF International

Prepared by NSF International staff with assistance from NSF Technical Review Panel members shown below:

Matthew Arduino, M.S., Dr P.H.	Centers for Disease Control and Prevention
Alicia Diehl, Ph.D.	Texas Commission on Environmental Quality
Richard W. Gilpin, Ph.D., RBP, CBSP	Dr. Richard W Gilpin, LLC
Rob Herman	NSF International
Eason Lin, Ph.D., MBA.....	National Kaohsiung Normal University
Lance Peterson, M.D.	NorthShore University Health Systems
Robert W. Powitz, PhD, MPH.....	R.W. Powitz & Associates, PC
Louis Wetstein, Ph.D., P.E.	New York – Presbyterian Hospital
Steve Schira	Terra Marra International
David Swiderski	Terra Marra International
Frank van Heusden	Pentair

Additional thanks go out to the following NSF staff members who provided their input and assistance: Maren Roush, Bryan Schindler, Mike Blumenstein, Robin Bechanko, Nikki Beetsch, Rob Donofrio, Zach Geurin, and Mandy Huntoon.

Disclaimers

NSF International (NSF), in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. The opinions and findings of NSF represent its professional judgment. NSF shall not be responsible to anyone for the use of or reliance upon this protocol by anyone. NSF shall not incur any obligations or liability for damages, including consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this protocol. It is the responsibility of the user of this standard to judge the suitability of this protocol for the user's purpose.

NSF protocols provide basic criteria to promote sanitation and protection of public health and the environment. Provisions for mechanical and electrical safety have not been included in this protocol because governmental agencies or other national standards-setting organizations provide safety requirements.

Participation in NSF standards and protocol development activities by regulatory agency representatives (federal, state, or local) shall not constitute their agency's endorsement of NSF or any of its standards or protocols.

Preference is given to the use of performance criteria measurable by examination or testing in NSF standards and protocol development when such performance criteria may reasonably be used in lieu of design, materials, or construction criteria.

The illustrations, if provided, are intended to assist in understanding their adjacent standard requirements. However, the illustrations may not include all requirements for a specific product or unit, nor do they show the only method of fabricating such arrangements. Such partial drawings shall not be used to justify improper or incomplete design and construction.

At the time of this publication, examples of programs and processes were provided for general guidance. This information is given for the convenience of users of this standard and does not constitute an endorsement by NSF International. Equivalent programs and processes may be used.

Unless otherwise referenced, the annexes are not considered an integral part of NSF standards or protocols. The annexes are provided as general guidelines to the manufacturer, regulatory agency, user, or certifying organization.
