National foreword

This Published Document has been prepared by Technical Committee TCT/50, Public Network Operators Interconnect Standards Committee. It specifies the requirements of the MTP that are standardized for the use across a national interconnect between Public Network Operators. It supersedes PD 6639:1999 which is withdrawn.

This document contains ISC references to other documents, which are published as Published Documents. The cross-references are listed in the references clause of this document.

This Published Document is not to be regarded as a British Standard.

Summary of pages

This document comprises a front cover, an inside front cover, pages 1 to 14, an inside back cover and a back cover.

The BSI copyright notice displayed in this document indicates when the document was last issued.

This Published Document, having been prepared under the direction of the DISC Board, was published under the authority of the Standards Committee and comes into effect on 15 February 2001

PNO-ISC SPECIFICATION NUMBER 005

C7 INTERCONNECT MESSAGE TRANSFER PART (MTP)

NETWORK INTEROPERABILITY CONSULTATIVE COMMITTEE
Office of Telecommunications
50 Ludgate Hill
London EC4M 7JJ

0.2 Normative Information

All enquiries about distribution reproduction, changes and clarifications should be addressed in the first instance to the Chairman of the NICC/PNO-IG/ISC at the address on the title page.

DISCLAIMER The contents of this specification have been agreed by the NICC. The information contained herein is the property of the NICC and is supplied without liability for errors or omissions.

0.3 Contents

0	PREFACE	1
0.1	Title	1
0.2	Normative Information	2
0.3	Contents	3
0.4	History	5
0.5	Issue Control	5
0.6	References	5
0.7	Abbreviations	5
0.8	Scope	6
1	GENERAL	7
2	THE FORM OF THE REQUIREMENTS	8
3	MANDATORY REQUIREMENTS WHERE STP WORKING APPLIES	9
3.1	Treatment of received Level 2 signal units which are not understood.	9
3.2	Treatment of Spare Bits and Additional Fields in Level 3 received Messages.	9
3.3	Point Code Allocation	9
3.4	Message Length	9
3.5	Digital Bearers Derived from Multiplexes other than 2048kbit/s	9
3.6	Bit Rate of Analogue Signalling Data Links	9
3.7	Use of the Length Indicator	9
3.8	Flags	9
3.9	Repetition of Signal Units	9
3.10	Error Correction Procedure	9
3.11	Processor Outage	10
3.12	Threshold for Error Rate Monitor	10
3.13	Time-out Values	10
3.14	Signalling Network Management	10
3.15	Routing of Messages	10
3.16	Load Sharing Among Linksets	10
3.17	The Number of Links in a Linkset	10
3.18	Bit Rates of Links within a Linkset	10
3.19	Load Sharing within a Linkset	11
3.20	Signalling Route Availability	11
3.21	Signalling Network Congestion	11
3.22	Signalling Link Unavailability	11
3.23	Signalling Point Restart	11
3.24	Management Inhibiting	12
3.25	Congestion Procedures	12
3.26	Link Management Procedures	12
3.27	Initial Testing of Signalling Links on Activation and Restoration	12
3.28	Automatic Allocation of Signalling Data Links	12
3.29	Allocation of Service Indicator Codes	12
3.30	Signalling Network Management Messages	12
3.31	Allocation of Signalling Link Codes	13
3.32	Signalling Traffic Throughput	13
3.33	Message Transfer Times	13
3.34	Monitoring and Measurements	13

4 MANDATORY REQUIREMENTS WHERE STP WORKING DOES NOT APPLY..... 14

4.14 Signalling Network Management 14

4.15 Routing of Messages 14

4.30 Signalling Network Management Messages..... 14
