

Intelligent transport systems — System architecture, taxonomy, terminology and data modelling — Training requirements for ITS architecture

ICS 03.220.01; 35.240.60

National foreword

This Published Document is the UK implementation of ISO/TR 25104:2008.
The UK participation in its preparation was entrusted to Technical Committee EPL/278, Road transport informatics.
A list of organizations represented on this committee can be obtained on request to its secretary.
This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

This Published Document was published under the authority of the Standards Policy and Strategy Committee on 29 February 2008

Foreword.....	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions.....	1
4 Symbols and abbreviated terms	2
5 Subjects for education and training	3
5.1 Background information	3
5.2 What are “Intelligent Transport Systems”?	3
5.3 “User Needs” and “Fundamental Services” requiring ITS.....	3
5.4 Systems architectures for ITS	4
5.5 Standardization for ITS.....	4
5.6 Interoperability is important and achievable	5
5.7 Systems engineering for ITS	5
6 Example curricula for training related to ITS architecture and ITS standards.....	5
6.1 Prerequisite training	5
6.2 Introduction to ITS	5
6.3 ITS technology	6
6.4 ITS theory	6
6.5 Architecture aspects of ITS service provision	7
6.6 Technology aspects of ITS service provision (as they relate to system architecture).....	7
6.7 National and regional architecture development	8
6.8 Strategies to use standards in ITS.....	8
6.9 The process of standards development for ITS	8
6.10 National standards development organizations (SDO) for ITS.....	9
6.11 Other organizations relevant to ITS standards.....	9
6.12 Other architecture related issues.....	9
Bibliography	10

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

In exceptional circumstances, when a technical committee has collected data of a different kind from that which is normally published as an International Standard ("state of the art", for example), it may decide by a simple majority vote of its participating members to publish a Technical Report. A Technical Report is entirely informative in nature and does not have to be reviewed until the data it provides are considered to be no longer valid or useful.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO/TR 25104 was prepared by Technical Committee ISO/TC 204, *Intelligent transport systems*.
