

BSI Standards Publication

Intelligent transport systems — Roadside modules SNMP data interface

Part 5: Logs

National foreword

This Published Document is the UK implementation of [ISO/TS 20684-5:2022](#).

The UK participation in its preparation was entrusted to Technical Committee EPL/278, Intelligent transport systems.

A list of organizations represented on this committee can be obtained on request to its committee manager.

Contractual and legal considerations

This publication has been prepared in good faith, however no representation, warranty, assurance or undertaking (express or implied) is or will be made, and no responsibility or liability is or will be accepted by BSI in relation to the adequacy, accuracy, completeness or reasonableness of this publication. All and any such responsibility and liability is expressly disclaimed to the full extent permitted by the law.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 204, *Intelligent transport systems*.

A list of all parts in the [ISO 20684](#) series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

0.1 Background

The need for standardized communication with ITS field devices is growing around the world. Several countries have adopted Simple Network Management Protocol (SNMP) based field device communication standards.

There is a growing view and empirical evidence that standardizing this activity will result in improved ITS performance, reduced cost, reduced deployment time, and improved maintainability. The ISO 20684 series extends [ISO 15784-2](#) by defining the management information necessary to monitor, configure and control features of field devices. The data elements defined in all parts of ISO 20684 series may be used with any protocol but were designed with an expectation that they would be used with one of the [ISO 15784-2](#) protocols.

By using this approach, agencies can specify open procurements and systems can be expanded geographically in an open and non-proprietary manner, which reduces costs, speeds up deployment, and simplifies integration.

0.2 Overview

SNMP is a collection of well-thought-out and well-proven concepts and principles. SNMP employs the sound principles of abstraction and standardization. This has led to SNMP being widely accepted as the prime choice for communication between management systems and devices on the internet and other communications networks.

The original implementation of SNMP was used to manage network devices such as routers and switches. Since then, the use of SNMP has grown into many areas of application on the internet and has also been used successfully over various serial communications networks.

This document defines management information for ITS field devices following the SNMP conventions.

0.3 Document approach and layout

This document defines:

- a) the conformance requirements for this document ([Clause 4](#));
- b) a set of user needs for user-defined trigger conditions that can “fire” to initiate actions ([Clause 5](#));
- c) a set of detailed requirements for the identified user needs ([Clause 6](#));
- d) custom dialogues for the logging feature ([Clause 7](#));
- e) security considerations for the information defined in this document ([Clause 8](#));
- f) the management information bases that define the data for the defined requirements ([Annex A](#));
- g) the requirements traceability matrix (RTM) that traces the requirements to the design elements ([Annex B](#)).

Part 5: Logs

1 Scope

Field devices are a key component in intelligent transport systems (ITS). Field devices include traffic signals, message signs, weather stations, traffic sensors, roadside equipment for connected ITS (C-ITS) environments, etc.

Field devices often need to exchange information with other external entities (managers). Field devices can be quite complex, necessitating the standardization of many data concepts for exchange. As such, the ISO 20684 series is divided several individual parts.

This document specifies the user needs, requirements and design elements that are used to record timestamped information in a log for later retrieval. This allows a manager to determine the state of a particular object instance nearly simultaneously when the trigger action occurs without frequent polling.

NOTE 1 There are similarities between certain portions of NTCIP 1103.

NOTE 2 [ISO 20684-1](#) provides additional details about how the ISO 20684 series relates to the overall ITS architecture.

2 Normative references

3 Terms and definitions

For the purposes of this document, the terms and definitions given in [ISO 20684-1](#) apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

— ISO Online browsing platform: available at <https://www.iso.org/obp>

— IEC Electropedia: available at <https://www.electropedia.org/>

4 Conformance

This clause follows the rules defined in ISO 20684-1. Table 1 traces each user need to a set of software features. Table 2 traces each feature to a set of requirements. For a full understanding of these tables and codes, see ISO 20684-1.

Table 1 — User need and feature conformance

Need	Requirement	Conformance
5.1: Log user-defined exceptions		M
	6.1 : Log	M
	6.3 : Log manager	M
	20684-7 6.2: UTC clock	M
	20684-7 6.4: Object group	O

Table 2 — Requirement conformance

Feature	Requirement	Conformance
6.1: Log		
	6.1.2.1 : Determine log capabilities	M
	6.1.2.2 : Configure global logging limits	M
	6.1.2.3 : Verify global logging configuration	M
	6.1.2.4 : Retrieve logged event	M
	6.1.3.1 : Maximum data size	M
6.2: Log event factory		
	6.2.2.1 : Configure a log event factory	M
	6.2.2.2 : Verify configuration of log event factory	M
	6.2.2.3 : Toggle log event factory	M
	6.2.2.4 : Delete log event factory	M
6.3: Log manager		
	6.3.2.1 : Configure a log manager	M
	6.3.2.2 : Verify log manager configuration	M
	6.3.2.3 : Retrieve log manager statistics	M
	6.3.2.4 : Retrieve log manager summary statistics	M
	6.3.2.5 : Retrieve log manager status	M
	6.3.2.6 : Toggle a log manager	M
	6.3.2.7 : Clear old events from log	M
	6.3.2.8 : Clear all logs	M
	6.3.2.9 : Delete a log manager	M
	6.3.2.10 : Delete all log managers of an owner	M
	6.3.3.1 : Latency of event logging	M
