
SMPTE STABLE DOCUMENT

The attached SMPTE Engineering Document has been declared “Stable” by the controlling Technology Committee.

The SMPTE Operations Manual for Standards states:

A document should be stabilized if it is believed to be substantially correct, does not contain harmful or misleading recommendations, may still be relevant to equipment or practices in use, is stable, but does not represent current technology, and need not be subject to future reviews.

A Stable document shall still be made available and offered for sale by the Society, but it shall be prefaced by a cover page explaining its current status.

At any time, a Technology Committee may revise, amend, or otherwise initiate a new Project on a Stable document.

A Stable document is “In Force”, and not deprecated or withdrawn.

*** * * * ***

Note:

SMPTE “Stable” documents were previously described as “Archived” and the attached document may be marked as “Archived”. The status of a SMPTE document described as “Archived” is exactly as described above for a “Stable” document.

Stable documents may not adhere to the latest style and format of SMPTE documents, or to current usage of normative language. Suitable care should be taken in interpretation.

SMPTE STANDARD

Mapping VC-1 into the
MXF Generic Container

Table of Contents	Page
Forward	2
Intellectual Property	2
1 Scope	3
2 Conformance Notation	3
3 Normative References	3
4 Glossary of Acronyms, Terms and Data Types	4
5 Overview	4
6 MXF Encoders – Locating Data Access Units	4
6.1 Advanced Profile	4
6.2 Simple Profile and Main Profile	4
7 Data Access Units in the MXF Generic Container	5
7.1 Frame Wrapping	5
7.2 Clip Wrapping	5
8 Key-Length-Value Coding	5
8.1 Essence Element Key	5
8.1.1 Essence Element Count – Byte 14	6
8.1.2 Essence Element Type – Byte 15	6
8.1.3 Essence Element Number – Byte 16	6
8.2 Length	6
8.3 Value	6
8.3.1 Frame-wrapped	6
8.3.2 Clip-wrapped	6
9 SMPTE Universal Labels for VC-1	7
9.1 Essence Container UL	7
9.2 Picture Essence Coding UL	7
10 VC-1 Picture Essence Descriptor	8
10.1 VC1InitializationMetadata	9
10.2 Key Value	9
10.3 Length Value	10
11 Pre-Change	10
12 Index Tables	10
12.1 Indexing BI-Pictures and Skipped-Pictures	10
Annex A Bibliography (Informative)	11

Foreword

SMPTE (the Society of Motion Picture and Television Engineers) is an internationally-recognized standards developing organization. Headquartered and incorporated in the United States of America, SMPTE has members in over 80 countries on six continents. SMPTE's Engineering Documents, including Standards, Recommended Practices and Engineering Guidelines, are prepared by SMPTE's Technology Committees. Participation in these Committees is open to all with a bona fide interest in their work. SMPTE cooperates closely with other standards-developing organizations, including ISO, IEC and ITU.

SMPTE Engineering Documents are drafted in accordance with the rules given in Part XIII of its Administrative Practices.

SMPTE Standard 2037 was prepared by Technology Committee 31FS.

Intellectual Property

At the time of publication no notice had been received by SMPTE claiming patent rights essential to the implementation of this Standard. However, attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. SMPTE shall not be held responsible for identifying any or all such patent rights.

1 Scope

This standard defines how VC-1 bitstreams shall be mapped in the MXF Generic Container (SMPTE 379M).

VC-1 defines three possible profiles for compliant bitstreams: Simple, Main and Advanced. All of these profiles are supported by this standard.

VC-1 bitstreams comprise VC-1 encoded Pictures and both intra-coding and inter-coding mechanisms can be used. Both coding mechanisms are supported in this standard.

This standard maps the VC-1 encoded Pictures as either frame-wrapped or clip-wrapped using the mechanisms defined in SMPTE 379M, and both progressive and interlaced Picture representations are supported in this standard.

This standard defines the KLV coding, the Essence Container Universal Label, the Essence Compression Universal Label and the Essence Descriptor to be used when wrapping VC-1 bitstreams in the MXF Generic Container.

2 Conformance Notation

Normative text is text that describes elements of the design that are indispensable or contains the conformance language keywords: "shall", "should", or "may". Informative text is text that is potentially helpful to the user, but not indispensable, and can be removed, changed, or added editorially without affecting interoperability. Informative text does not contain any conformance keywords.

All text in this document is, by default, normative, except: the Introduction, any section explicitly labeled as "Informative" or individual paragraphs that start with "Note:"

The keywords "shall" and "shall not" indicate requirements strictly to be followed in order to conform to the document and from which no deviation is permitted.

The keywords, "should" and "should not" indicate that, among several possibilities, one is recommended as particularly suitable, without mentioning or excluding others; or that a certain course of action is preferred but not necessarily required; or that (in the negative form) a certain possibility or course of action is deprecated but not prohibited.

The keywords "may" and "need not" indicate courses of action permissible within the limits of the document.

The keyword "reserved" indicates a provision that is not defined at this time, shall not be used, and may be defined in the future. The keyword "forbidden" indicates "reserved" and in addition indicates that the provision will never be defined in the future.

A conformant implementation according to this document is one that includes all mandatory provisions ("shall") and, if implemented, all recommended provisions ("should") as described. A conformant implementation need not implement optional provisions ("may") and need not implement them as described.

3 Normative References

The following standards contain provisions which, through reference in this text, constitute provisions of this standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this standard are encouraged to investigate the possibility of applying the most recent edition of the standards indicated below.
