

6th edition, August 2006

Translation

O R

Composition and calculation of the weight and braking of passenger trains

Composition et détermination de la charge et du freinage des trains de voyageurs
Zugbildung und Festlegung der Last und der Bremsung der Reisezüge

UNION INTERNATIONALE DES CHEMINS DE FER
INTERNATIONALER EISENBAHNVERBAND
INTERNATIONAL UNION OF RAILWAYS

Leaflet to be classified in Volumes :

IV - Operating

V - Rolling Stock

Application :

With effect from 1 August 2006

All members of the International Union of Railways

Record of updates

1st edition, January 1949	First issue under no. 196
2nd edition, January 1951	Revision of Leaflet with new number
4th edition, January 1974	Amendment of points 1.1 and 2
5th edition, August 2002	Computerisation of Leaflet
6th edition, August 2006	Addition of point 4

The person responsible for this leaflet is named in the UIC Code

Contents

Summary	1
1 - Passenger train composition.....	2
1.1 - Definition of the composition limits	2
1.2 - Train composition limits (tractive units not included)	2
2 - Calculation of the weight of a passenger train	3
3 - Calculation of passenger train braking.....	4
4 - Braking performance in winter conditions	5
4.1 - Definition of winter conditions from a braking perspective.....	5
4.2 - Measures to guarantee brake performance.....	5
4.3 - Other measures	6
Bibliography	7

Summary

This leaflet defines the following conditions to be observed for the operation of passenger trains:

- maximum train composition limit expressed in number of vehicles, axles, hauled tonnage and trainset length;
- calculation of the weight of trains (tare + inclusive weight specified in the leaflet);
- calculation of the minimum braking percentage in relation to the tare.

It sets out recommendations for braking in winter conditions.
