Appendix E - Envelope of brake-rigging adjusters (over 75 kN).....	9
Appendix F - Pin diameters of articulated joints	10
Appendix G - Cast iron brake blocks	11
Bibliography	12

Summary

This Leaflet sets out the fundamental characteristics necessary to ensure the interchangeability of brake block holders, brake-rigging adjusters and cast iron brake blocks in international traffic.

1 - Brake block holder

The dimensions for interchangeability of brake block holders with a single brake block and holders with non-articulated two-piece brake blocks are defined in Appendix A - page 5 and Appendix B - page 6.

To prevent the brake blocks from protruding beyond their holders it is recommended that holders and brake triangles be replaced and repaired when any of the limit dimensions shown in Appendix C - page 7 is reached. The dimensions shown in the figure concern all brake block holders.
